deteriorated original volume
owned by the University of
Minnesota Library. 2005

P R E F A C E.

THE period fixed by the Punjab Government for the compilation of the *Gazetteer* of the Province being limited to twelve months, the Editor has not been able to prepare any original matter for the present work; and his duties have been confined to throwing the already existing material into shape, supplementing it as far as possible by contributions obtained from district officers, passing the draft through the press, circulating it for revision, altering it in accordance with the corrections and suggestions of revising officers, and printing and issuing the final edition.

The material available in print for the *Gazetteer* of this district consisted of the Settlement Reports, and a draft *Gazetteer* compiled between 1870 and 1874 by Mr. F. Cunningham, Barrister-at-Law. Notes on certain points have been supplied by district officers; while the report on the Census of 1881 has been utilised. Of the present volume, Section A of Cap. V (General Administration), and the whole of Cap. VI (Towns), have been for the most part supplied by the Deputy Commissioner; while Section A of Cap. III (Statistics of Population) has been taken from the Census Report. But with these exceptions, the great mass of the text has been taken almost, if not quite verbally, from Mr. Cunningham's compilation already referred to, which again was largely based upon Munshi Amín Chand's Settlement Report of the district.

The report in question was written in 1863, and, modelled on the meagre lines of the older settlement reports, affords very inadequate material for an account of the district. No better or fuller material, however, was either available or procurable within the time allowed. But when the district again comes under settlement, a second and more complete edition of this *Gazetteer* will be prepared; and meanwhile the present edition will serve the useful purpose of collecting and publishing in a systematic form, information which had before been scattered, and in part unpublished.

The draft edition of this *Gazetteer* has been revised by Colonels Minchin and MacMahon, and Mr. Ogilvie. The Deputy Commissioner is responsible for the spelling of vernacular names, which has been fixed throughout by him in accordance with the prescribed system of transliteration. The final edition, though completely compiled by the Editor, has been passed through the press by Mr. Stack.

P R E F A C E.

THE period fixed by the Punjab Government for the compilation of the *Gazetteer* of the Province being limited to twelve months, the Editor has not been able to prepare any original matter for the present work; and his duties have been confined to throwing the already existing material into shape, supplementing it as far as possible by contributions obtained from district officers, passing the draft through the press, circulating it for revision, altering it in accordance with the corrections and suggestions of revising officers, and printing and issuing the final edition.

The material available in print for the *Gazetteer* of this district consisted of the Settlement Reports, and a draft *Gazetteer* compiled between 1870 and 1874 by Mr. F. Cunningham, Barrister-at-Law. Notes on certain points have been supplied by district officers; while the report on the Census of 1881 has been utilised. Of the present volume, Section A of Cap. V (General Administration), and the whole of Cap. VI (Towns), have been for the most part supplied by the Deputy Commissioner; while Section A of Cap. III (Statistics of Population) has been taken from the Census Report. But with these exceptions, the great mass of the text has been taken almost, if not quite verbally, from Mr. Cunningham's compilation already referred to, which again was largely based upon Munshi Amin Chand's Settlement Report of the district.

The report in question was written in 1863, and, modelled on the meagre lines of the older settlement reports, affords very inadequate material for an account of the district. No better or fuller material, however, was either available or procurable within the time allowed. But when the district again comes under settlement, a second and more complete edition of this *Gazetteer* will be prepared; and meanwhile the present edition will serve the useful purpose of collecting and publishing in a systematic form, information which had before been scattered, and in part unpublished.

The draft edition of this *Gazetteer* has been revised by Colonels Minchin and MacMahon, and Mr. Ogilvie. The Deputy Commissioner is responsible for the spelling of vernacular names, which has been fixed throughout by him in accordance with the prescribed system of transliteration. The final edition, though completely compiled by the Editor, has been passed through the press by Mr. Stack.

CHAPTER I.

THE DISTRICT.

The Hisar district is the central one of the three districts included in the Hisar division, and lies between north latitude $28^{\circ} 36'$ and $29^{\circ} 49'$, and east longitude $75^{\circ} 16'$ and $76^{\circ} 22'$. Lying on the confines of Rájputána, and forming a part of the great prairies which stretch between and include Bikáner on the one hand and Patiala on the other, it shares with Rohtak and Simla only among Punjab districts the peculiarity of having absolutely no river-frontage. It is bounded on the north and north-east by the Native State of Patiala, on the east by the Rohtak district, and the State of Jind, on the south and south-east by the Dádri territory of Jind and the State of Luháru, and on the west the prairies of Bikáner and the Sirsa district. It is thus completely surrounded by Native States; save where at its north-western and south-eastern corners it touches the Sirsa and Rohtak districts. It is divided into five *tahsils*, of which that of Barwála occupies the north-east, that of Fatehábád the north-west, that of Hási the east centre, that of Hisar the west centre, and that of Bhiwáni the south and south-west of the district. Some leading statistics regarding the district and the several *tahsils* into which it is divided are given in Table No. I on the opposite page. The district contains three towns of more than 10,000 souls, as follows:—

Bhiwáni	33,762
Hisar	14,167
Hási	12,656

The administrative head-quarters are situated at Hisar, which lies nearly in the centre of the district. Hisar stands 12th in order of area and 21st in order of population among the 32 districts of the province, comprising 3·32 per cent. of the total area, 2·68 per cent. of the total population, and 3·12 per cent. of the urban

Town.	North Latitude.	East Longitude.	Feet above sea-level.
Hisar	$29^{\circ}10'$	$75^{\circ}46'$	689
Hási	$29^{\circ}8'$	$76^{\circ}0'$	705
Bhiwani	$28^{\circ}48'$	$76^{\circ}11'$	870*
Barwala	$29^{\circ}22'$	$75^{\circ}57'$	730*
Fatehabad	$29^{\circ}31'$	$75^{\circ}30'$	720*

* Approximate.

The tract under description consists of vast and, for the most part, sandy plains, scrubby towards the north, with rank grass and brushwood, which relieve the dreariness of the prospect by intervals of green. Stretching southwards, the plains become more and more sandy and more and more sterile, and the dead level is interrupted by undulating sand hills. Here coarse grasses and a stunted growth of desert trees and shrubs form the sole trace of spontaneous vegetation. The sand hills increase in height

Chapter I.

population of British territory. The latitude, longitude, and height in feet above the sea, of the principal places in the district are shown in the margin.

General features.

Chapter I.
Descriptive.
General features.

towards the south, until at last, some 15 to 25 miles from the Luháru and Bikáner border, they give way to a series of bare rocky hills, which rise like islands out of a waste of sand; the highest of them, however, at the foot of which lies the town of Tushám, does not rise more than 800 feet above the surrounding plain. Such are the general features of the face of the country, as they would strike a passing traveller. It must not, however, be supposed that there are no variations of soil. Indeed, on the banks of the Western Jamna Canal, which passes through the district from east to west, close by the towns of Hási and Hísár, the soil is of more than ordinary productiveness, except in years when the canal water fails.

Chak Hariána.

The whole area of the district is divisible into three tracts, each with its own characteristics. They are styled respectively *chak Hariána*, *chak Bággar*, and *chak Náli*.* *Chak Hariána* is the largest of these tracts, containing 292 out of the 659 villages into which the district is divided. It occupies the heart of the district, and is traversed by the Western Jamna Canal, which, running through the district from east to west, separates this *chak* into two nearly equal portions. In this part of the district the soil is technically described as *dákar* and *rausli*. The former of these terms is applied to a strong clayey soil, breaking up into large clods, and requiring very abundant rain to saturate it sufficiently for seeding. The latter term implies a very similar soil, but less close and firm, having generally an admixture of sand. It does not require quite the same amount of saturation as the harder *dákar*. Even here, however, in the central portion of the district, the soil is freely interspersed with patches of sand, and towards the south it blends gradually with the sandy plains and hillocks already described. Though rich when sufficiently saturated, it produces almost nothing when there is a failure in the natural rains. Water is only touched in the wells at a depth varying from 107 to 133 feet below the surface; and the cost of constructing wells seldom falls below Rs. 1,500. Well irrigation is therefore not attempted, except in very bad seasons, when a few acres of land are irrigated for growing vegetables around the village site. Again, the hardness of the soil renders ploughing a matter of great labour. It is said among the peasants of the tract that that season only is favourable in which the soil becomes moist for 100 inches below the surface. In dry seasons not only is there no harvest, but hardly an ordinary grass crop. In order to make the most of the rain-fall, the farmers leave large tracts uncultivated, and, collecting the drainage from these by means of water-courses, conduct it on to their cultivated fields. Such uncultivated plots are styled *upráhan*, and the water-courses *ágam*. The canal irrigation is confined to 54 villages, lying immediately on either side of the canal. The soil of these is in all respects the same as that of the villages a little further removed from the canal, with the exception that the constant irrigation has rendered it softer and more rich. Even this, however, produces nothing unless irrigated.

* The word *chak* applies to any portion of land divided off, a sub-division.

Chak Bāgar lies to the south, and includes the towns of Tushām and Bhiwāni. Here nothing interferes with the universal reign of sand. The name is borrowed from the tract of country just beyond the border in Bikāner, which has from time immemorial been called Bāgar, and has given its name to the tribe of Bāgri Jāts, of whom more hereafter. Cultivation in *chak Bāgar* is carried on with no ordinary difficulty. If there is no rain, there is no crop at all, not even a blade of grass. If rain is too heavy, the sand is washed down from the sand hillocks upon the cultivated fields and chokes the seed, so that cultivators have not unfrequently to sow three or four times for each harvest. Dust-storms often change the appearance of the country, and hills appear where yesterday was a cultivated field; and the farmer, if he wishes for a harvest, must set to work again and plough up the ground which before had underlain a sand hill. But against all these disadvantages, there are compensating benefits; the labour of ploughing is next to nothing, owing to the lightness of the soil, and camels being used for this work, as much as 40 acres are ploughed up at a time. Again, a very slight fall of rain is sufficient to produce a harvest; and if it rains at any time between March and August, the farmers can raise a crop of *bājra* here, while the same amount of rain may be quite inadequate to affect the richer soil of the country further north; so that the latter will lie barren while the sandy soil of *chak Bāgar* will produce a crop, scanty it is true, but sufficient for the wants of its inhabitants. There is neither stream nor canal in this part of the district, nor is well irrigation possible to any great extent. In a few villages the people have *kachcha* (unlined) wells on the banks of the village tanks, by which they irrigate a few fields for vegetables. Masonry wells are not constructed, because the water is liable to become brackish, and it would be a waste of money to build wells, which, a few years afterwards, might become absolutely useless. Cases have been known where village sites have been abandoned owing to deterioration of the wells, the water becoming so salt as to be unfit for use by man or beast.

Chak Nāli owes its name to the fact that during the rains it is traversed by two streams, or *nālas*. It lies to the north of the district, and includes the towns of Barwāla and Fatehābād. The two streams are the Ghaggar and a smaller branch of the same. The latter separates from the parent stream to the east of the border in Patialā territory, and runs, to the north of it, at a distance of a few miles, through the northern corner of this district, and on into the Sirsa district, rejoining the parent stream not far beyond the town of that name. The soil is classed for the most part as *rausli*. But the population is very scanty, and only a small proportion of the country had been brought under cultivation at the time of Settlement (1864). The uncultivated portion is thickly covered with low brushwood, useful only for fuel; and even where cultivated, the produce is, at best, indifferent. The villages upon the main stream of the Ghaggar are known by the name of *Dāban*, on account of the abundance of a kind of grass (locally known as *dāb*) which grows upon its banks. The villages

Chapter I.

Descriptive:

*Chak Bāgar:**Chak Nāli:*

Chapter I.
Descriptive.
Chak Nali.

on the northern branch are called collectively *Sotar*. In all these villages, no crop at all is grown except on land which has been irrigated from one or the other of the branches of the Ghaggar. And as the flow of water in these is most variable and uncertain, the harvests too, if for this reason only, would be highly precarious. But the river irrigation, available at the best for not more than a month or six weeks in the year, is not alone sufficient to ensure the ripening of a crop; and the ultimate result of the harvest is almost as dependent upon timely rains as in the more sterile parts of the district. In the *Dában* villages there is one harvest, that of the spring (*rabi*), which, though sown after irrigation from the river, is entirely dependent for coming to perfection upon rain in December or January. If no rain falls, the out-turn is reduced by one-half. In the *Sotar* villages two harvests are secured in good years, that of the autumn being rice. Well irrigation is carried on to a considerable extent to supplement irrigation from the river, but the farmers never trust to this alone for their crops. Water, however, is plentiful and good, nor is the cost of constructing wells excessive. In *Ját* villages the wells are of masonry (*pakka*), but the ambition of the *Pachhadás*, who occupy the greater part of the *chak*, does not soar so high, and they are content to leave their wells unlined (*kachcha*).

The Ghaggar.

The Ghaggar, already alluded to, rises in the Himalayas bordering upon the Ambála district, and, passing through Ambála and the Native State of Patiála, enters the district in two branches a few miles to the south-west of Akálgarh, a town in Patiála, and traversing the district, passes on into Sirsa. The flow of water is most uncertain, the stream being entirely dependent for its supply upon the fall of rain in the lower Himalayas. Moreover, a large portion of the water is carried off for purposes of irrigation before the stream enters this district.*

Western Jamna Canal.

The canal enters the district about half-way down the eastern border, and runs through it from east to west passing the towns of Hási and Hisár. After crossing the western border, any water that remains is swallowed up in the sands of Bikáner. The canal was first constructed by the Emperor Fíroz Sháh to water his new town of Hisár Fíroza about A.D. 1360. It was found closed when the country passed under British rule, and was first reopened in the season of 1826-27, but the people for several years obstinately refused to avail themselves of its advantages, under the impression, not unusual at the time, that the use of its water would be followed by an immediate enhancement of the sum demanded as land revenue. A severe famine in 1832-33 first drove them to it, and since that period irrigation has been steadily progressing.†

Lines of drainage.

The surface drainage of the district, which is not utilized by water-courses for purposes of irrigation, finds its way through the district by the Western Jamna Canal and the Ghaggar. There are no other water-courses of any significance. The Ghaggar, precarious and uncertain as to flow of water, is the only stream that

* For a more detailed description of the Ghaggar, see the Gazetteer of the Ambála district.

† See Ambála Gazetteer.

enters the district. The bed of the old Chautang *nála* is utilized for the Western Jamna Canal.*

Near Fatehábád, and again at Mura Khera, a village near the Ghaggar, there are *jhíls*, or swampy lakes, caused by the overflow of the Ghaggar in time of heavy rain. The Fatehábád *jhíl* is $1\frac{1}{4}$ miles in length by $\frac{1}{2}$ mile broad, with an area, when full, of 15,960 acres, and a depth of from 8 to 9 feet in the deepest parts. The Mura Khera *jhíl* is about $\frac{1}{2}$ mile long by $\frac{1}{4}$ mile in breadth, having an area of 800 acres, and a depth of 7 or 8 feet. These, however, are not perennial, and do not deserve the name of lakes. They invariably dry up in the hot season. Crops of paddy are grown in the shallows, and, when dry, wheat, gram and barley are sown in their beds.

Table No. III shows in inches the total rainfall registered at

Year.	Inches.
1862-63 ...	21·9
1863-64 ...	24·8
1864-65 ...	14·3
1865-66 ...	28·1

each of the rain-gauge stations in the district for each year, from 1866-67 to 1882-83. The fall at head-quarters for the four preceding years is shown in the margin. The distribution of the rainfall throughout the year is shown in Tables Nos. IIIA and IIIB.

Chapter I. Descriptive.

Jhíls or swamps.

Rainfall, temperature, and climate.

Tables Nos. XI, XIA, XIB, and XLIV give annual and monthly statistics of birth and deaths for the district and for its towns during the last five years; while the birth and death-rates since 1868, so far as available, will be found at page 25 for the general population, and in Chapter VI under the heads of the several large towns of the district. Table No. XII shows the number of insane, blind, deaf-mutes, and lepers as ascertained at the Census of 1881; while Table No. XXXVIII shows the working of the dispensaries since 1877. In the District Census Report for 1881, the Civil Surgeon wrote as follows:—

Disease.

"The villagers along the canal suffer from malarial fever, dyspepsia, enlargement of the spleen and liver. They look sallow and anæmic, whereas the inhabitants of our *bárání* tracts, Ranghars, Játs, Bishnois, Gújars and Kaim Khánis are strong, athletic, and healthy looking, with physical development and bodily vigour good. They suffer mostly from skin diseases, guinea worm, gravel, stone in the bladder, and tubercular foot and hand, called *verí nágra*, both red and black parasitic fungi. The level of the subsoil water varies very much. The superficial stratum in the district consists of clay more or less mixed with sand, extending to a depth of 10 to 20 feet, and then impervious clay, having little or no sand intermixed with it, which retains the rain water in tanks for drinking use. The supply of water is sometimes inadequate to the demand during the summer. The superficial stratum in some parts of the district is composed of grey and white *kankar*; tree cultivation has either not been sufficiently encouraged or has not thriven in this district, although in the neighbourhood of Hisár and Hānsi we have extensive forest *jangal*."

The Civil Surgeon also states that the most prevalent diseases in the district are malarious fever, rheumatic affections, ophthalmia,

* For a detailed account of the canal and its history, see Ambála Gazetteer.

Chapter I.**Descriptive.****Disease.**

respiratory affections, and skin diseases. Of fever cases by far the greatest number have occurred in the Bhiwāni and Hisār *tahsils*; respiratory affections are also chiefly confined to those portions of the district, and the same may be said of skin diseases and ophthalmia. Rheumatic affections are pretty evenly distributed.

Geology.

Our knowledge of Indian geology is as yet so general in its nature, and so little has been done in the Punjab in the way of detailed geological investigation, that it is impossible to discuss the local geology of separate districts. But a sketch of the geology of the province as a whole has been most kindly furnished by Mr. Medlicott, Superintendent of the Geological Survey of India, and is published *in extenso* in the provincial volume of the Gazetteer series, and also as a separate pamphlet.

Minerals.

Kankar, or argillaceous limetone in nodules, is found in many localities throughout the district. Soft *kankar*, fitted for making lime, is dug in villages Barāwa, Rawāsa, Chhappar Kalān, Katwār, Dhāna Narsiyan, Kharkhari, Sindhar, and Ratiya. The annual produce is calculated to be 92,000 maunds. About 200,000 maunds of hard *kankar* for road-making are also quarried annually in about 15 different places in the district. Saltpetre is manufactured by evaporation in the villages of Talū, Muhammadpur, Mahamra, Shakārpur, Himmatpura and Bahūna. The annual out-turn is estimated to be 15,800 maunds. The number of evaporating pans in use is 17. There is no peculiarity in the mode of manufacture, which resembles that which is in vogue elsewhere. The saltpetre is not refined in the district, but exported in the rough, just as it leaves the pits.

**Wild animals.
Sport.**

Leopards are occasionally met with, and hyænas and wolves, and also jackals, foxes, and porcupines, are common. *Nilgae*, black buck, ravine deer, and pig, abound throughout the district, especially in the Government *bir*. Hares are found everywhere. Bustard, florican, partridges of both kinds, sandgrouse of both sizes, and quail abound; while the village tanks and the *jhils* on the Ghaggar contain duck and teal, and in winter the Ghaggar is visited by *kunj*, heron and by wild geese. Peafowl, half-domesticated, are common round the villages. Altogether Hisār is one of the best shooting districts in the province. During the last five years rewards to the amount of Rs. 1,031 have been given for the destruction of 253 wolves and 4,962 snakes.

Flora.

The trees most commonly found are the *kikar* and *jand*. These seldom grow in clumps, but are scattered sparsely over the country, the former growing to a height of between 30 and 40 feet, and the latter, in favourable localities, to a height of 25 feet. *Pīpal*, *nīm*, *siras* and *shisham* are also to be met with here and there, but are not indigenous to the soil. The commonest shrubs in the brushwood which covers so great a portion of the district, are the *jāl* and the *kair* or *karl*. The fruit of these shrubs, called respectively *pīlū* and *tend* berries, play an important part in the diet of the common people. The *pīlū* berry begins to appear in the month of *Baisākh* (April), and ripens by the end of May, attaining the size of a pea. It has a sweetish, insipid taste, and

is generally swallowed in handfuls, skin, seeds, and all. It is eaten generally by the poorer classes, who consider the fruit a good alternative, although it is said to be somewhat heating. In times of scarcity it constitutes the principal food of the poorer classes, who camp out day and night in the *jangals* while the season lasts. The *kair* bush, from which the *tend* berry is produced, is a straggling shrub devoid of leaves. From the commencement of the month of *Chait* (March) to the end of *Jeth* (June), the bush is covered thickly with blossoms (called by the natives *bārwa*), of a dull red coral tint, and in this state it presents a very attractive appearance. The poorer classes, especially in times of scarcity, boil the blossoms, which are seasoned with salt and pepper, and eaten as a relish with coarse bread. While in a green and unripe state, the berry is called *tend* or *tent*, and is also boiled and eaten. Occasionally, like the blossom, it is made into a pickle. When the berry ripens, it assumes a red or sometimes a kind of purple tint, and in this stage it is called *pinjū*, and is eaten without boiling, but it is not considered very wholesome. In seasons of drought the bush is twice covered with berries, which is not the case in ordinary years; and the people look upon it as a special provision of providence for the succour of the poor. The second time of bearing is from *Sánwan* (August) to *Asauj* (October). The ripe fruit, however, of the second crop is not eaten, being full of worms. Another common and most useful shrub is the *gharberi*. In appearance it is no better than a small prickly bush. Its fruit, however, resembling a small plum, is collected and eaten; and as drought does not affect it, it forms in times of scarcity a valuable resource to the villagers. The leaves are threshed and collected for fodder under the name of *pála*: its briars form excellent hedges, and when no longer required, serve as fuel. It prefers a sandy soil, and is most common in the southern portion of the district.

There is no real forest in the district. In one portion only, near the town of Hisár, does the scrubby burshwood, described above, become thick enough in any way to deserve the name. Here there is a tract of 42,479 acres, which has been set aside for the use of the Hisár cattle farm, and is known as the *sarkári bñr* (Government forest). Here and there, portions of this tract are cultivated with oats and lucerne for fodder; but the greater part is in a state of nature, and produces nothing but grass and brushwood, which abound with game, and afford excellent pasturage for the cattle belonging to the farm. There is another smaller, but somewhat similar, tract near Hási the area of which is only 2,068 acres. It is usually leased out for grazing purposes.

Chapter I.

CHAPTER II.

HISTORY.

Chapter II.

History.

Early history.

The tract now included in this district, together with parts of the district of Rohtak, are better known to history under the name of Hariána. The origin of the name is attributed by the people to a Rájá named Hari Chand, who is said, at some undefined period, to have come from Oudh, and peopled this part of the country. Others derive the name from the word *hari* (slain), in allusion to a tradition of a great slaughter of Khatriás by Paras Rám, on 21 different occasions, at a village a few miles to the west of Jínd. The Settlement Officer, Munshi Amín Chand, derives the name from *hariában*, the name of a wild plant, with which the country was formerly said to be overgrown. A more probable derivation is from *hara* (green), in allusion to the expanse of brushwood which once covered the greater part of the district, and even now covers large portions of it, giving at certain seasons of the year an aspect of greenness to the whole country. Of the period antecedent to the Muhammadan conquest of Hindustán, the nearest approach to history is to be found in certain vague traditions of the settlement in the district of various branches of the Royal Tunwár Rájput race of Dehli, followed, after the fall of that house, by fresh immigrations under Chauhán leaders. One thing is certain, that at the earliest period of which anything is known, the town of Hánsi was the centre of local authority, and the capital of Hariána. The Muhammadan rule was extended to Hánsi shortly after the fall of Dehli before Shaháb-ud-dín. The city of Hisár had not yet been founded, and Hánsi still continued for many years the seat of local administration. In the 14th century, however, the attention of the Emperor Firoz Sháh Tughlak was drawn to Hariána, and this monarch founded a new town, naming it after himself, Hisár Firoza, or the "fort of Firoz." An interesting account of this incident is given by Shams-i-Shiráz Afif, one of Sir H. Elliot's historians.* "Sultán Firoz," we read, "passed several years after "his campaigns in Bengal (1352-53) in riding about Dehli, and "finding himself in the neighbourhood of Hisár Firoza, he "exerted himself actively and liberally in endeavouring to provide "for the needs of the country." The site of the future city was at this time occupied by two villages, called the Little and the

* Shams-i-Shiráz says that "he (Firoz) conducted two streams into the city "from two rivers—one from the river Jamna, the other from the Satlaj. Both "these streams were conducted through the vicinity of Karnál, and after a length "of about 80 kos discharged their waters by one channel into the town." No traces remain of the canal from the Satlaj; and there is every reason to suppose that there is a mistake in the reading of Shams-i-Shiráz which mentions the Satlaj. See account of Ambála District, heading "Western Jamna Canal."

Large Larás. The neighbourhood of this village, "continues the "historian," "greatly pleased Sultán Firoz, and he thought it would "be well to build a city there; for it was very deficient in water, "and during the hot season travellers who came from Trák and "Khurásan had to pay as much as four *jitals* for a pitcher full. So "the Sultán resolved to build a city, being filled with hope that, "if he built a town for the benefit of Musalmáns, God would provide "it with water." Finding, however, when his city was completed, surrounded with a wall and ditch, and adorned with a palace "which had no equal," that his expectations with regard to water remained unfulfilled, he "resolved in his munificence to bring a supply of water thither,"—a resolve which resulted in the construction of the canal now known as that of the Western Jamna. The secret of Firoz Sháh's selection of Hisár Firoza as a favourite residence is probably to be found in his passion for sport, which found ample vent in the wild *jungals* with which the district was then clothed. In those days the Ghaggar, or Saraswati as it then was called, carried down a far larger volume of water into this part of the country than it does now, and it may be well believed that the country in its neighbourhood was a hunting ground of considerable excellence. Firoz Sháh's hunting expeditions extended beyond the Satlaj as far as Dipálpur (now in the Montgomery district), 130 miles to the north-west of Hisár. Another fact of some interest to be gleaned from the account of Shams-i-Shiráz is that in the 14th century the now deserted route across the wastes of Montgomery, Sirsa, and Hisár was much frequented by travellers between Dehli and Khurásán. Whatever amount of truth there may be in Shams-i-Shiráz's rather fulsome account of Firoz Sháh's treatment of Hariána, it is undoubted that, both by the construction of a canal and by giving to the industries of the country the incentive always afforded by the residence of a Court, that monarch did much to promote the welfare of the country. Besides Hisár, he also built the town of Fatehábád, in this district, naming it after his son, and conducted a small canal from the Ghaggar to supply it with water—a canal which is still in use.

An interesting account of Taimúr's march through Bhattiána and Hariána will be found in Elliot's *History of India*, III, 428ff, 92ff; Price's *Retrospect of Muhammadan History*, III, 247ff, and Brigg's *Ferishtah* I, 489ff.

The village of Firoz is still in existence; it was one of the smaller forts founded by Firoz Sháh, and is some 12 miles from Sirsa. The position of Rajabpur and Ahroni is doubtful; but at Dasul, some 12 miles north of Tohána, there are remains of an old fort call Kol, which perhaps mark the site of Ahroni. The local tradition states that Taimúr marched from Fatehábád to Kol and attacked the Pachchádas of that place, driving them out with great loss, and forcing them to retreat to Tohána and take up a position on the banks of the Ghaggar between the villages of Himmatpur, Púri, and Udiipur, where they were again attacked next day by Taimúr's troops. When Taimúr passed on to Kaithal, they resettled at Kol.

There is but little worthy of notice in the way of architectural remains of this period. Old mosques and other buildings are

History.

Antiquities.

dotted about the country, especially near the town of Hisár, but none are of any archæological interest. Two stone pillars erected by Firoz Sháh at Hisár and Fatehábád must be excepted. These pillars, respectively 30 and 20 feet high, are similar to the well-known monolith called the *lât* of Firoz Sháh, at Dehli, of which they are probably imitations (see Archæological Survey Reports, V. 140-142). The pillar at Fatehábád bears an inscription which is said to be now quite illegible. There are some ancient inscriptions on the rocks of the hill above Tusham. Copies of them have been sent to General Cunningham, who finds the date of one of them to be about A.D. 43. They bear the same standard which characterises the coin of Ghalot Kacha, father of Chandra Gupta I, whose most probable date is 78 A.D. The body of the inscription is a record of a family of religious teachers or Acharjiyas, worshippers of Vishnu. (See Archæological Survey Reports, V. 136 to 140).

Subsequent history.

From the time of Firoz Sháh, Hisár long continued to be a city of some importance, and the head-quarters of a *Sarkár* or revenue division. In the time of Akbar, the *Sarkár* of Hisár Firoza embraced the whole of the present district, together with Sirsa, as far as the river Wár, and parts of the modern Rohtak district, and of territory now included in Bikáner to the west, and the protected Sikh States to the east. The following list and accompanying account of the *maháls* contained in this *Sarkár* is extracted from Beames' edition of Sir H. Elliot's Supplemental Glossary, pp. 132-55 :—

SARKAR HISAR FIROZA.

1, Agroha ; 2, Ahroni ; 3, Athkhara ; 4, Bhangiwal ; 5, Púnián ; 6, Bharaugi ; 7, Barwála ; 8, Bahttu ; 9, Birwa ; 10, Bhatner ; 11, Tuhána ; 12, Tusham ; 13, Jínd ; 14, Jamálpur ; 15, Hisár ; 16, Dhátrat ; 17, Sirsa ; 18, Sheorám ; 19, Sidhmukh ; 20, Swáni ; 21, Shanzdeh Dehát ; 22, Fatehábád ; 23, Guhána ; 24, Khanda ; 25, Mihún ; 26, Hánsi.

There are twenty-seven *maháls* in this *Sarkár* (Hisár being counted as two), and four *dastúrs*—Haveli Hisár Firoza, Guhána, Mahan, and Sirsa. There are, however, several *parganas* excluded from the *dastúr* list, for what reason does not appear.

Of these *maháls*, those which do not retain their old name in our territory are numbers 2, 3, 4, 5, 6, 8, 9, 10, 11, 13, 14, 16, 18, 19, 21, and 24.

2. Ahroni is partly in Ratiya and partly in Fatehábád. The historians of Taimúr point out its position, by saying it is on the road from Fatehábád to Tuhána. The place was burnt and pillaged by the conqueror, merely because the inhabitants did not come out to pay their respects. Ahroni has now reverted to its original name of Alurwan, whereas in *Sarkár* Chanár Ahirwára, which derived its name from the same tribe, has now been corrupted into Ahrora.

3. Athkhara is under the Rája of Jínd, and is known now by the name of Kasonan.

4. Bhángiwal, so called from the tribe of Játs which inhabited it, is the old name of Darba, in which place the officers of the Rája of Bikáner built a fort, and thenceforward it came to be considered the chief town of a *pargana*.

Chapter II.

History.

Subsequent history.

5. Púnián, called also after a tribe of Játs, is in Bikáner, but is now included in another *pargana*.

6. Bharaugi is also in Bikáner.

8. Bahttu is partly in Fatehábad and partly in Darba. Bahttu Khás is in the former *pargana*.

9. Birwa is in the protected Sikh territory.

10. Bhatner. The old town of Bhatner is in Bikáner, but part of the *pargana* is now included in Rániya.

13. Jínd gives name to one of the protected Sikh States.

14. Jamálpur is included in the late cession from Patiála. The old town of Jamálpur is near Tuhána.

16. Dhátrat was in Jínd, but is now in British territory.

18. Sheorám is in the Bágár country, in the *jágr* of Nawáb Amír Khán. Two-thirds of Sheorám are now in Luháru, the remainder in Dádri.

19. Sidhmukh is in Bikáner.

21. Shanzdeh Dehát or Kariát (i.e., the sixteen villages) is included in Ratiya Tuhána, amongst the late cessions from Patiála. The *iláka* is generally known by the name of Garhi Ráo Ahmad. I have heard it stated that it is in Jínd, and not in Ratiya Tuhána.

24. Khánda is in Jínd.

To these may be added 25, which is probably Maham in Rohtak. 26 is of course the modern Hánsi.

The modern *parganas* are—

1 Bahal.	3 Ratiya.
2 Rániya.	4 Darba.

Bahal was originally in Swáni, from which it was separated in A.D. 1758 by Jawáni Singh, a Rájput, who built a mud fort at Bahal, and maintained possession of a few neighbouring villages.

Rániya was in Bhatner. The old name of the village was Rajabpur. The Ráni of Ráo Anúp Singh, Rathaur, took up her abode here, built a mud fort, and changed the name of Rajabpur to Rániya, which it has since retained.

Ratiya is now included in one *pargana* with Tuhána. It was composed of villages from Ahroni, Jamálpur, and Shanzdeh Kariát.

Darba.—See Bhangiwál.

Another table, somewhat differing from Sir H. Elliot's, is given by the Settlement Officer, as showing the territorial division under the Muhmmadans. He does not say whence it was obtained, but it is reproduced, as it stands, the spelling only being modified, for the sake of uniformity.

No.	Name of <i>pargana</i> or <i>mahal</i> .	Name of tribe who owned the <i>mahals</i> .	Remarks showing the changes which have since taken place in these <i>mahals</i> .
1	Agroha	Jatu Rajputs and Jats	Now in Fatehabad <i>tahsil</i> jurisdiction.
2	Aharwan	Gujars and Jats	Do.
3	Bahttu	Jats	Do.
4	Fatehabad	Rajputs, Jat and Gujars	Do.
5	Hisar (<i>alias</i> Habeli)	Do.	<i>Tahsil</i> Hisar.
6	Barwas	Do.	Do.
7	Swani	Do. Jatu	Do.
8	Tusham	Do. do. and Jats	<i>Tahsil</i> Bhiwani.
9	Kairu	Do.	
10	Hansi	Do. do.	<i>Tahsil</i> Hansi.

23	Bhatner	Do. do.	Do.
24	Sidmukh	Rathours and Rajputs	Do.
25	Sheoram	Jats	Granted by the British to Nawab of Luharu.
26	Jind	Jatu Rajputs and Sayads	Belongs to the Raja of Jind.
27	Athkhara (8 villages) ..	Tunwar Rajputs and Jats ..	Do. to the Patiala <i>sidka</i> .

In the early years of the 18th century, we find Hisar under the rule of Nawab Sháhdád Khán of Kasúr (1707—1737). In his time the condition of the people and country is said to have been one of considerable prosperity. This, however, was not destined to last for long. In Sambat 1818 (A. D. 1761) Hariána was held in *jágír* by Rukn-ul-daula, minister to Farrukhsher, who made over the great part of it to Faujdár Khán, the Nawab of Farakhnagar in Gurgáon, during whose time the country was first ravaged by Nádir Sháh, and then distracted by the inroads of the Sikhs, who were at this time making themselves masters of a large tract south of the Satlaj. At the same time the Bhattís, a turbulent Rájput tribe, who have given the name of Bhattiána to a large tract of country now mostly included in the Sirsa district, began to make themselves formidable to the north. The history of the latter portion of the century is one record of confusion and bloodshed. Hariána was the battle-field on which met the Marahtás from the south, the Sikhs from the east, and the Bhattís from the north. The whole was nominally subject to the Marahta power, before which the Mughal empire of Dehli had melted away, but the real masters of the greater portion were the Sikhs and Bhattís.

The Bhattís.

The Bhattís at this period were a pastoral race, fierce and restless in their habits, and impatient of any control. They were little more than a band of robbers; but their boldness, the rapidity of their movements, and the savage character of their country, saved them from being crushed by their powerful neighbours of Patiala and Jind, whom they continually irritated by their raids. They lived for the most part in open villages, or wandered about with their flocks in search of pasture. A few towns, or rather fortified villages, were scattered through the waste, which the Bhattí tribes made their rendezvous on the approach of danger. These were Fatehabád, Sirsa, Rániya and Abohar.* Rája Amar Singh, of

* Griffin's "Rájas of the Punjab," p. 179.

Patiala, more than once invaded their country and stormed their strongholds, but the reluctant submission of the chiefs lasted scarcely a moment beyond the withdrawal of the Patiala troops; and after the death of Amar Singh in 1781 they completely recovered their independence, and retained it thenceforth, almost without interruption, until their final subjugation by British arms.

To complete the ruin inaugurated by these constant struggles, nature lent her aid in the great famine of 1783, known as the *Chálśa Kál* or famine of *san chálś* (1840 of the *Sambat* era), by which the whole country was depopulated. The year previous had been dry and the harvest poor, but in 1783 it entirely failed. The country was depopulated, the peasants abandoning their villages, and dying by thousands of disease and want.* In the neighbourhood of Hānsi only, the inhabitants held their own, but even here the smaller villages were deserted by their inhabitants, who took refuge in the larger villages, until the severity of the famine should be passed. In other parts of the district none remained who had the strength to fly. No reliable statistics of the mortality are extant, but there can be no doubt that the people suffered terribly. Some died helplessly in their villages, others fell exhausted on the way towards the south and east, where they thronged in search of food and employment. Nor was the mortality confined to the inhabitants of the district, for thousands of fugitives from Bikāner flocking into Hariāna perished in the vain endeavour to reach Dehli and the Jamna. The price of the commonest food grains rose to five and six seers per rupee. Fodder for cattle failed utterly, and the greater part of the agricultural stock of the district perished. But for the berries found in the wild brushwood, the distress would have been even greater. Stories are told of parents devouring their children; and it is beyond a doubt that children were during this fatal year gladly sold to any one who would offer a few handfuls of grain as their price. The rains of the previous year had failed entirely, and this year too it was not until September that a drop fell. The heat of the summer was intense, and all through July and August the people looked in vain for relief. At last, in the month of *Asauj* (the latter part of September and beginning of October) copious rain fell here and throughout the province. There were not many left to turn the opportunity to account, and the few who were found in the district were for the most part immigrants from Bikāner, who had been unable, after crossing the border, to penetrate further eastward. These, however, seized upon the deserted fields and cultivated patches here and there. The result was a spring harvest in 1784 of more than ordinary excellence. The country gradually became re-peopled, but principally from the west, comparatively few of the original inhabitants returning to seek their old homes. Many who did return, found their fields cultivated by recent immigrants. In some cases the immigrants were ousted; in others they submitted to pay a quit rent to the former proprietors. The district has been re-colonized, but it cannot be said that the traces of the famine are yet lost. The

George Thomas.

present parched and dried up appearance of the country is popularly said to date from the disastrous effects of the drought of 1783; the fatal year is the era from which every social relation of the people dates. Few villages have a history which goes back uninterruptedly to a period before the famine, and there probably is not one which does not date its present form of tenure from the time when cultivation was resumed.

In 1795, the adventurer, George Thomas,* took possession of Hānsi and Hisār. He was an Englishman of some tact and courage, who had come to India in 1781, and had wandered about the country, seeking his fortune for several years, till he was taken into the service of the celebrated Zebun Nisan Begam, more commonly known as the Begam Samru of Sardhāna. In 1782, for some misconduct, he was reduced in rank, and left her service in disgust for that of the Marahta Apa Khandi Rāo, a relative of Mādhoji Sindhia, and master of the Jhajjar, Dādri and Nārnol territory. Thomas raised troops for the Marahtās, and instructed them, as well as he was able, in the European system of drill; and in return the district of Jhajjar was assigned to him as a military fief. He built a fort, which he named Georgegarh, a name which by the people was corrupted into Jahāzgarh. When Bāwa Rāo, nephew of Apa Khandi Rāo, succeeded his uncle, Thomas asserted his independence, seized Hānsi and Hisār, and began to encroach upon the neighbouring Sikh States. Before the close of 1799, he had extended his authority over all the Hisār, Hānsi and Sirsa territory, and a great part of Rohtak. Even the Bhattīs paid him a nominal allegiance, though Thomas made no effort to interfere directly with the authority of the Bhatti chiefs over their respective clans. By this time, however, the adventurer, being compelled to resort to constant raids as the only means of supporting his numerous army, had made himself so obnoxious to the Sikh chieftains of the Cis-Satlaj States that, unable themselves to reduce him, they at last in 1801 combined to send an embassy to the French General of Sindhia's army at Dehli, with a prayer for assistance against their common enemy. General Perron received the embassy with conspicuous cordiality. The increasing power of George Thomas had roused in him feelings at once of jealousy and alarm; and, rejoicing in the opportunity of suppressing a rival, whose power, if not checked in time, might eclipse his own, he furnished a force under one of his Lieutenants, Louis Bourquin, to act with the Sikh allies. At first Thomas gained a slight success, but on the arrival of reinforcements from Dehli, he was compelled to retire to Hānsi. Here he was surrounded, and after an obstinate defence, surrendered. Abandoning all his conquests, he retired into British territory, never again disturbing the peace of the Cis-Satlaj States. These events occurred in 1802.

The establishment
of British rule.

With the remainder of the Dehli territory, Hisār passed nominally under British rule after the victories of Lord Lake over the Marahtās in the following year. But the new owners of the country, either from ignorance of its value, or from sheer apathy, took no steps for many years even to define the borders of their

* Griffin's "Rājās of the Punjab," p. 81.

acquisitions. The strip of country extending from Bhiwáni, in a direct line to the north-west as far as the banks of the Satlaj, and now composing the districts of Hisár and Sirsa, was left a prey to the depredations of the Sikhs and Bhattís. The right of the British Government, indeed, was not allowed to lapse. A military outpost was maintained at Hási, and a series of native Governors, or *názims*, were appointed to the charge of Hariána, including Rohtak. The successive *názims* were Mirza Iliás Beg, Nawáb Muín-ud-dín Khán, Ahmad Bakhsh Khán of Luháru, and Abdul Samed of Dujána, who had his head-quarters at Rohtak. For five years confusion reigned supreme. The first *názim* was killed in a skirmish with the Bhattís. The second, the third and the fourth, after short incumbencies, successively resigned the hopeless task of Government. From 1808 to 1810, apparently, there was no Governor. Meanwhile a Nawáb Zabta Khán and Nawáb Khán Bahádar Khán, chiefs of the Bhattís, were masters of the situation, and at last proclaimed their independence. The former of the chiefs resided at Sirsa, the latter at Fatehábád, but they had spread their depredations in every direction. At last, in 1810, a force was sent under a British officer to restore order. Bahádar Khán was overpowered and expelled the country, while the tract of Fatehábád, which he had held in possession, was for the first time brought under the British Government.* Zabta Khán gave himself up, swore fealty to the British Government, and was confirmed in his possession of Rániya and Sirsa. In 1818, however, raids were made upon Fatehábád, with the connivance of Zabta Khán, and again a British force was sent to restore order. This time Zabta Khán's estates were confiscated, and the whole territory, now known as the Sirsa district, came under British rule.

Chapter II, History.

The establishment
of British rule.

During these fifteen years, from 1803 to 1818, while the English had paid no attention whatever to the state of the border, the Sikh chiefs had not been idle. Seeing that the time would come when the British would appreciate the value of their acquisitions, they steadily laboured, by gradual encroachments, to manufacture the strongest possible claims to as large a portion as they could annex without opposition. The overthrow of the Bhattís in 1818 removed the last barrier to the inroads of Patialá; and at once all along the western border of Sirsa and Hisár, the encroachments grew more and more systematic. The notice of Government was drawn to the unsettled state of the border in 1818 and again a few years later, but it was not until 1835, when Sir C. Metcalfe was Lieutenant-Governor of the North-West Provinces, and Mr. William Fraser, Resident at Dehli, that it was determined to bring the matter to a settlement. The Collector of the district, Mr. Ross Bell, was selected for the duty, and certain principles were laid down for his guidance. These were, that whatever belonged to Patialá at the time of British conquest of Hariána in 1803 should be adjudged to that State, and whatever

Sikh States.

belonged to the Government which the English had superseded, should be adjudged to the latter. With regard to the district of Fatehábád and the portion of the Bhattí country conquered in 1810, and to the remaining portion of that country conquered in 1818, the same principle was to hold good, and the *status* of those years to be maintained, the Sikhs retaining all that they held in these two portions of country, respectively, prior to 1810 and 1818. Mr. Bell's report bears date 15th September, 1836. His conclusions may be summarized as follows:—Hariana, including the Bhattí territory (or Bhatiana) was made up of 19 districts, all of which were nominally subject to the Marahátas in 1803: Beri, Rohtak, Maham, Hānsi, Hisár, Agroha, Barwála, Siwáni, Bahal, Aharwán, Fatehábád, Sirsa, Rániya, Bhatner, Safidon, Dhátrat, Jamálpur, Tuhána and Kassuhán. Of these, the first 10 were considered by Mr. Bell to have passed into British possession from the Marahátas in 1803, and were at once adjudged to the English Government. Sirsa, Rániya and Fatehábád required subsequent reconquest from the Bhattís, and the question of the right to these was to be decided according to the status of 1810 and 1818. Bhatner never came under British rule, and was not included in the present controversy. It now forms an integral portion of Rájputána. Safidon and Dhátrat had been made over to Bhág Singh of Jind by the Marahátas, and were accordingly adjudged to that State. Jamálpur, Tuhána and Kassuhán, together with the forts of Badriki and Kanhauri, alone remained for adjudication. Of districts affected by the conquest of 1803, Kassuhán originally belonged to Patiála. It was wrested from him by George Thomas in 1798, and from George Thomas in turn by General Perron in 1802; but on the cessation of hostilities, was again made over to Patiála. This tract was accordingly adjudged to Patiála. A strip of country adjoining Kassuhán, and known as the Gorakpur *iláka*, which had been in turn held by Thomas and Bourquin, and had in 1803 been made over to three chiefs by the British, was claimed by the Rája of Patiála, on the strength of four letters from General Perron ordering it to be made over to him. As, however, there was no evidence of a transfer of possession from Bourquin to Patiála, Mr. Bell rejected the claim. The forts of Badrikri and Kanhauri were adjudged to Patiála, on the same grounds as the Kassuhán district. Jamálpur and Tuhána were in the possession of Patiála at the time of Mr. Bell's investigation, but it was clear that that State could not have acquired possession prior to 1809, for they were in the hands of the Marahátas in 1803, and the Bhattís held territory till 1809, which intervened between them and the Patiála frontier. These Mr. Bell adjudged to the English Government. Tuhána is included in the present Barwála *tahsil*.

There remained for consideration the effect of the reconquest of Fatehábád, Sirsa and Rániya in 1870 and 1818. In Fatehábád Mr. Bell found 25 villages in the possession of Patiála and 21 in possession of Kaithal. Rája Amar Singh of Patiála had conquered Fatehábád, Sirsa and Rániya from the Bhattís, but the famine of 1783 having completely devastated the country, the Bhattís recovered possession in 1784, and retained it until subdued by the British.

The possession of the Sikh chiefs in Fatehabád dated accordingly, from a period subsequent to the conquest in 1809, and the district was adjudged to the English Government. Sirsa, in the same manner, was in the possession of the Bhattís until 1818, and though in 1836 the whole was in the possession of the Sikh States of Patiála, Kaithal and Nábha, their claims were rejected, except as to four villages. In Rániya, the Sikh possession was ascertained to date from 1821, subsequent to the conquest of the Bhattís, and the claims of the Chiefs were absolutely rejected.

This decision having given to the British Government a tract more than a hundred miles long and from ten to twenty miles broad, a large part of it, including Sirsa, Rániya and Abohar, was separated from Hisár and formed into a new district, which was administered by an officer bearing the title of Superintendent of Bhattiána, subordinate to the Political Agent at Ambála. The Government, however, while accepting Mr. Bell's conclusions as generally correct, declared itself willing to take a liberal view of any doubtful points; and the Court of Directors at home, adopting a still more lenient line of argument, sent out directions which ultimately led to the re-opening of the whole question. The position taken by the Court of Directors was the less called for by reason of the fact that the Patiála and other Sikh Chiefs had forfeited by their conduct all claim to consideration. The Rájá of Patiála had refused to acknowledge the right of Mr. Bell to make enquiries; he had forbidden the cultivators of the disputed villages to give any information as to the time when they were settled: he had thrown every obstacle in Mr. Bell's way, and had thwarted him to the best of his power. The fact was that the Chiefs, being in possession of the whole of the disputed land, could only lose by the enquiry, and they resolved to protract the struggle to the utmost. Mr. Bell, however, received orders to decide on such evidence as he could obtain. He did so, with the results already detailed. But the remonstrances of Patiála had their effect on the Government at home, and on 1st January, 1840, instructions were issued to Mr. Conolly to effect some sort of compromise, not in any way surrendering the principle which had been originally laid down, but pressing it against the Sikhs less rigorously. Mr. Conolly submitted his report in May of the same year. He proposed to give up the most valuable portions of the Hisár district, lying principally in the neighbourhood of the Ghaggar, and his proposals were accepted by the Government of the North-West Provinces. The following tabular statement shows the financial result of Mr. Conolly's decision as far as the Hisár district was concerned:—

	No.	Cultivation in acres.	Total area in acres.	Approximate annual value, in Rs.
Villages to be restored ...	119	99,403	272,415	90,000
Villages to be retained ...	147	68,788	255,623	60,000
Total ...	266	168,191	528,038	1,50,000

Chapter II.

Disputes with the
Sikh States.

Chapter II.**History.****Disputes with the
Sikh States.**

Mr. Conolly reported also upon the Bhattiána or Sirsa frontier. Here he was inclined to give up forty or fifty villages; but the want of an accurate map prevented him from making definite proposals. The Mahārāja of Patiala, though he had obtained so much, still, with characteristic obstinacy, held out, and asserted his right to the whole tract. On receiving, however, a peremptory warning that he must either accept what Mr. Conolly gave or nothing, he came to his senses, and consented to take over the villages assigned to him in Hisár, and was paid their revenue, less 20 per cent. for the cost of management, from the time they had been in English possession. This final transfer was made in 1842. The adjustment of the Bhattiána border was postponed, pending a survey of the country. This being completed, a report, based upon the scheme suggested by Mr. Conolly, was drawn up in 1842, recommending the restoration of 42 villages to Patiala. No action, however, was taken upon this report. The Rája again and again protested against what he considered a deprivation of territory. The Sikh War of 1846, followed by the transfer of the Political Agency to Lahore, and then the second Sikh War and the annexation of the Punjab, combined to postpone a settlement of the question, and it was not until 1856 that final orders were passed. In that and the preceding year the matter was taken up by Mr. G. Barnes, Commissioner of the Cis-Satlaj States, who proposed the restoration of 20 villages only, urging that the offer of 42 villages, made in accordance with Mr. Conolly's proposal, had been rejected by Patiala, and had fallen to the ground. The Punjab Government, however, supported by the Imperial authorities, decided that Mr. Ross Bell's decision having once been re-opened, and Mr. Conolly's award endorsed by the Government, it was necessary to abide by the latter. Government, accordingly, in July 1856, directed 41 villages to be given to the Rája, with arrears of revenue from 1843 to 1856. This arrangement, with the exception of the substitution of a few villages for others, was shortly afterwards carried out. Twenty-six villages were made over by the Superintendent of Bhattiána, and five villages, yielding a revenue equal to that of the remainder, were transferred by the Bhadaur Sardárs, who received as compensation an assignment on the revenues of Government villages. Thus ended this long dispute, memorable on account of its intricacy, and the magnitude of the interests at stake. The origin was in 1803 and its conclusion in 1856, every step being marked by importunity or obstinacy on one side and concession after concession upon the other. The pertinacity of the Sikh almost deserved success; and, if the English Government obtained far less than was its clear right, it could at least afford to be magnanimous.

**Administrative
arrangements**

During the early years of British rule, the whole of Hariána was managed by a "Superintendent," under the orders of the Political Agent at Dehli, who was also Commissioner of the Dehli territory. The first separation of the Dehli territory into districts took place in 1819.* By this arrangement the subdivisions of Hānsi and Hisár, together with Sirsa, Rohtak and

* See Dehli Gazetteer.

Pánípat (now in Karnál), were included in one district, called the "northern" district (*Zila Shimáli*). In 1820, Hisár and Hánsi, together with Sirsa and the remainder of the present district, except Bhiwáni, were constituted into a separate jurisdiction, having its civil head-quarters at Hisár. Sirsa was detached in 1837, after Mr. Ross Bell's adjudication upon the frontier, and placed under a separate officer styled the Superintendent of Bhattiána. In 1861 the district of Hisár attained its present proportions by the addition of the Bhiwáni sub-division. Meanwhile the Dehli territory had been transferred to the Punjab, and divided into two divisions, having their head-quarters respectively at Dehli and Hisár. The Hisár division contained at first the districts of Hisár, Rohtak, Sirsa and Jhajjar. The last was, however, soon abolished, part being ceded to the Sikh States and the remainder absorbed into Rohtak.

Chapter II.**History.**

Administrative arrangements.

During the Mutiny, this district, as well as that of Sirsa, was for a time wholly lost to British rule. Up to this time a cantonment had been maintained at Hánsi; and in 1857, soon after the outbreak at Dehli, the troops stationed there, consisting principally of a force called the Hariána Light Infantry, threw off their allegiance, and all Europeans were either murdered or driven out as fugitives. Added to this, the Bhattís rose, under their hereditary chiefs, and their example was followed by the greater portion of the Muhammadan population. These wild tribes, reverting to their ancient habits on the removal of the strong hand of English rule, formed plundering bands and ravaged the country. Before the close of the summer, however, and before the fall of Dehli, a force of Punjab levies, under General Van Cortlandt, crossed the Satlaj, and, being joined by contingents from the chiefs of Bikáner and Patiala, fought and won several actions with the insurgents in Hisár, as well as in Sirsa and Rohtak, dispersed them utterly, and recovered the country to British rule. On the restoration of order, the civil and criminal courts were re-opened upon the Punjab system, and the district was administered by Punjab officers. In the following year, with the remainder of the Dehli territory, it was formally annexed to this province.

The Mutiny of 1857.

In 1860-61 Hisár suffered, in common with the neighbouring districts, from a terrible famine. Little information is available as to details; but it was reported that 192 human beings and 38,000 cattle died of starvation, and that 21,400 souls and 47,500 cattle fled the district. These numbers probably fall far short of the truth.

The famine of 1860-61.

The district of Hisár suffered more than any other in the whole province from the famine of 1869-70. Situated on the border of the Bikáner desert, it shares many of its characteristics. Thus distress was felt here very early, and as early as August, 1868, foreigners from the neighbouring independent States came in for food and work. Relief works were sanctioned in October, 1868, when the accounts were already gloomy in the extreme. The *kharíf* and grass crop had both entirely failed; the latter more completely than even in 1860-61. The tanks had all dried up, the

The famine of 1869-70.

Chapter II.

History.

The famine of
1869-70.

wells in many places had become brackish, and the inhabitants had no choice but to leave their villages and seek food and pasture elsewhere; while the numbers of people flocking in from Rájputána, where affairs were still more gloomy, added to the complication. Government-sanctioned advances, first of Rs. 30,000 and then without limit; and private subscriptions were collected to the amount of Rs. 10,000, which was supplemented by a similar grant from Government. In January the local subscriptions, with the Government equivalent, were found sufficient to meet actual requirements. Relief-houses were established, where the infirm received food, cooked or uncooked, and public works were in progress, giving employment to all able-bodied persons who required it. Up to the 20th of February, 106,808 men and 126,970 women and children had received relief, and 80 poor-houses were then open at which food was distributed. During the month of March above 110,000 persons were relieved and about 33,000 were employed, and this average was maintained during the following month; but during May the distress fast increased, the great heat withering up the grass, and the cattle beginning to die in great numbers. Many immigrants from Bikáner again came into the district, and the poor, unable to buy grain, supported themselves on the fruit of the *karíl* which was unwholesome when eaten in any quantities, and the berries of the *jál* or *pílú*. But whether the jungle fruits were wholesome or not, they were the means of saving many lives; for this year of famine, the crop of wild fruit was larger than had been ever before remembered, and during the month of June gave food to many thousand people. But the condition of Hisár, in July, became critical in the extreme. The fruit of the *ber*, which had been the chief support of so many, was now exhausted, while the number of immigrants had largely increased, a stream passing through daily from the south, others returning from the neighbourhood of Dehli to their homes. The people were losing heart, fodder was almost unprocurable, and wheat rose to 11 or 12 seers the rupee. The rain, which fell so generally during the latter part of July, did very temporary good to Hisár. The weekly number relieved had risen on the 17th of July to 40,000, and the mortality was so severe among the cattle that 118,338 had already died. The state of affairs in August will be seen from the following extract from a letter from the Deputy Commissioner:—

“The district is exposed to the first shock of the immigration of the starving population of the Rájputána States. Considering then that, being always poor, we have no resources left unused; that there will have been no harvest for two years; that for all practical purposes cattle no longer exist in the district; and that we are being inundated by a flood of paupers from Bikáner, Jaipur, and other States, the calculation which gives three-quarters of the people of the district as the number which will have to be fed by Government, if they are not to starve, does not seem incorrect. Indeed, in saying that one-fourth of the population can do without aid, it is only on the supposition that the canal authorities will afford a reasonable supply of water to the district. It appears then that, in case the *kharif* fails, there will be some 350,000 people to whom relief must be given. It is in vain to expect that every exertion possible can prevent a fearful mortality. The people are so reduced by

starvation and want that their bodies are almost rotten; the least blow brings on a festering sore. To use physical force to such is impossible. Many of them are so wild with hunger, and others wish to get more than their share by scrambling, that orders to keep quiet and to wait till the turn of each person comes are quite unheeded, and as soon as the food is brought, a general rush takes place, and the people shove and scramble like so many wild beasts."

Early in September a little rain fell, but prices still rose, wheat selling at 8½ seers per rupee; and during the last week of August and the first of September 125,710 persons received relief. But about the 7th of September the abundant rain, so long withheld, fell at last. The worst was now over. The immigrants began to move homewards; the number receiving relief fell to 35,939 during the last week of October, and a final grant of Rs. 4,500 on the 29th of November closed the accounts of the Central Relief Committee with this district, to which it had sent during the year Rs. 35,500. It is said that 300,000 cattle died during this famine in the two districts of Sirsa and Hisar.

The record of district officers before the year 1867 is not forthcoming. Since then the following officers have held charge of the district:—

Colonel T. F. Forster, 1867-80; Mr. M. Macauliffa, 1880-81; Major W. G. Parker, March to October 1881; Mr. Ogilvie, October 1881, to date.

Some conception of the development of the district since it came into our hands may be gathered from Table No. II, which gives some of the leading statistics for five-yearly periods, so far as they are available; while most of the other tables appended to this work give comparative figures for the last few years. In the case of Table No. II, it is probable that the figures are not always strictly comparable, their basis not being the same in all cases from one period to another. But the figures may be accepted as showing in general terms the nature and extent of the advance made.

CHAPTER III.

THE PEOPLE.

Chapter III, A.

SECTION A.—STATISTICAL.

Statistical.

Distribution of population.

Table No. V gives separate statistics for each *tahsil* and for the whole district, of the distribution of population over towns and villages, over area, and among houses and families; while the number of houses in each town is shown in Table No. XLIII. The statistics for the district as a whole give the following figures. Further information will be found in Chapter II of the Census Report of 1881 :—

Percentage of total population who live in villages	{	Persons	84.90
		Males	85.23
		Females	84.51
Average rural population per village	686
Average total population per village and town	799
Number of villages per 100 square miles	18
Average distance from village to village, in miles	2.53
Density of population per square mile of	{	Total area	{	Total population	143
		Cultivated area	{	Rural population	121
			{	Total population	278
		Culturable area	{	Rural population	236
			{	Total population	154
			{	Rural population	131
Number of resident families per occupied house	{	Villages	1.47
		Towns	1.50
Number of persons per occupied house	{	Villages	7.03
		Towns	6.22
Number of persons per resident family	{	Villages	4.79
		Towns	4.16

Migration and birth-place of population.

Table No. VI shows the principal districts and States with which the district has exchanged population, the number of migrants in each direction, and the distribution of immigrants by *tahsils*. Further details will be found in Table No. XI and in supplementary Tables C. to H. of the Census Report for 1881, while the whole subject is discussed at length in Part II of Chapter III of the same report. The total gain and loss to the district by

Proportion per mille of total population.

	Gain.	Loss.
Persons ...	224	136
Males ...	229	92
Females ...	188	188

migration is shown in the margin. The total number of residents born out of the district is 112,874, of whom 62,420 are males and 50,474 females. The number of people born in the district and living in other parts of the Punjab is 68,706, of whom 25,105 are males and 43,601 females. The figures given on the opposite page show the general distribution of the population by birth-place.

The following remarks on the migration to and from Hisar are taken from the Census Report:—

"The only tracts besides Rohtak which march with Hisar are the Native States, Rajputana, and Sirsa. From the two first it has received a large surplus of population, which is a natural result of the introduction of canal irrigation and the great development of the Hisar district under our rule. The Sirsa district, however, has practically been populated since we received it, and here the movement of population has been in the other direction. Hisar lies between the fertile districts of Karnal and Rohtak on the east, and the far less fertile Native States and Rajputana on the other three sides, and it has given to the former and taken from the latter. The low proportion of males shows that the migration in the case of Rohtak and Karnal is chiefly reciprocal. The same test shows that the emigration, except to Sirsa, is largely of the same type. The moderate proportion of males (neither as high as in temporary nor as low as in reciprocal migration) among the immigrants from Sirsa, the Native States and Rajputana, and the emigrants to Sirsa, shows how largely these movements are permanent. A part of the movement eastwards was probably due to drought which drove the cattle towards the river and canal in search of pasture. Much of the immigration dates from the famine of *Sambal* 1840, when a large portion of the district was almost wholly deserted by its inhabitants."

The tide of immigration to which the district owes its population has now ceased, all available land having been taken up. But in seasons of drought and scarcity, and these are all too frequent, numbers of the poorer classes from beyond the border flock into British territory in search of food and employment. With the return of prosperous seasons, however, they find their way back to their homes in Bikāner. As a counterpoise to these immigrations in years of scarcity, numbers of the poor, principally Chamars, Pachchadas and Ahirs, migrate from the district towards Delhi, Ambala and the Satlaj, in search of employment. But instead of remaining, as a few years ago they would have done, in any place where they might find work, they have now become more settled and sufficiently wedded by ties of association to their homes, to return again as soon as a good season gives a prospect of better times.

The figures in the statement given at the top of the next pages show the population of the district as it stood at the three enumerations of 1853, 1868, and 1881. The first of these was—

Increase and decrease of population

Chapter III, A.

Statistical.

Increase and
decrease of popu-
lation.

	Census.	Persons.	Males.	Females.	Density per square mile.
Actuals.	1853 ...	330,852	183,211	147,641	100
	1868 ...	484,681	266,847	217,834	137
	1881 ...	504,183	272,267	231,916	143
Percent- age.	1868 on 1853	146.5	145.7	147.5	137
	1881 on 1868	104.0	102.0	106.5	105

Unfortunately the boundaries of the district have changed so much since the Census of 1853 that it is impossible to make a really accurate comparison. The area has increased since that date, and the real increase in population is smaller than would appear from the figures. It will be seen that the annual increase of population per 10,000 since 1868 has been 15 for males, 48 for females, and 30 for persons, at which rate the male population would be doubled in 448.3 years, the female in 143.8 years, and the total population in 228.4 years. Supposing the same rate of increase to hold good for the next ten years, the population for each year would be, in hundreds—

Year.	Persons.	Males.	Females.	Year.	Persons.	Males.	Females.
1881	504.2	272.3	231.9	1887	513.5	274.8	238.7
1882	505.7	272.7	233.0	1888	515.0	275.2	239.9
1883	507.3	273.1	234.2	1889	516.6	275.7	241.0
1884	508.8	273.5	235.3	1890	518.1	276.1	242.2
1885	510.3	273.9	236.4	1891	519.7	276.5	243.4
1886	511.9	274.4	237.6				

But it is probable that the rate of increase will be higher than this, as the Census of 1881 was taken at the end of a period of distress which had reduced the population, not only by impairing the fecundity of the people, but also by driving them to move elsewhere in search of pasture or employment. The increase in urban population since 1868 has been smaller than that in rural population, the numbers living in 1881 for every 100 living in 1868 being 102 for urban and 104 for total population. This is probably due to the attraction of the mercantile population to the line of railway. The populations of individual towns at the respective enumerations are shown under their several headings in Chapter VI.

Tahsil.	Total population.		Percentage of population of 1881 on that of 1868.
	1868	1881	
Hisar ..	107,442	98,106	92

Bhiwani ..	104,170	104,556	99
Barwala ..	66,266	78,549	118
Fatehabad ..	80,466	93,358	116
Total district * ..	484,743	504,183	104

Within the district the increase of population since 1868 for the various tahsils is shown in the margin. On this subject the Deputy Commissioner wrote as follows in his report on the District Census of 1881:—

* These figures do not agree with the published figures of the Census Report of 1868 for the whole district. They are taken from the registers in the district office, and are the best figures now available.

"In the Hisar *tahsil* there is a decrease of 9,336, which is attributed partly to the large number of deaths from cholera, which occurred in 1879, and partly to the fact of numbers of people having emigrated in consequence of successive dry seasons. In the Bhiwani *tahsil* there is a decrease of 614, which is not of sufficient importance to need remark. In the Hānsi *tahsil* there is an increase in the population of 4,210, which is also comparatively unimportant. In Fatehābād and Barwāla *tahsils* there is an increase of 12,892 and 12,283 respectively, which is attributed to extensive immigration from Bikāner and Patialā territory, and to a considerable increase in the cultivated area. There has been no alteration in the boundaries of the district or of any of the *tahsils* since 1868."

Chapter III, A.

Statistical.

Increase and
decrease of popu-
lation.

Table No. XI shows the total number of births and deaths registered in the district for the five years, from 1877 to 1881, and the births for 1880 and 1881—the only two years during which births have been recorded in rural districts. The distribution of

Births and deaths.

Persons ...	33	40

the total deaths and of the deaths from fever for these five years over the twelve months of the year is shown in Tables Nos. XIA and XIB. The annual birth-rates per mille, calculated on the population of 1868, are shown in the margin.

The figures below show the annual death-rates per mille since 1868 calculated on the population of that year:—

	1868	1869	1870	1871	1872	1873	1874	1875	1876	1877	1878	1879	1880	1881	Aver- age.
Males	9	25	15	19	16	12	17	18	12	12	25	41	21	27	19
Females	8	22	14	18	16	12	16	18	12	12	24	43	20	26	19
Persons	9	24	15	19	16	12	16	18	12	12	25	42	20	27	19

The registration is still imperfect, though it is yearly improving; but the figures always fall short of the facts, and the fluctuations probably correspond, allowing for a regular increase due to improved registration, fairly closely with the actual fluctuations in the births and deaths. The historical retrospect which forms the first part of Chapter III of the Census Report of 1881, and especially the annual chronicle from 1849 to 1881, which will be found at page 56 of that report, throw some light on the fluctuations. Such further details as to birth and death-rates in individual towns as are available, will be found in Table No. XLIV, and under the headings of the several towns in Chapter VI.

The figures for age, sex and civil condition are given in great detail in Tables Nos. IV to VII of the Census Report of 1881; while the numbers of the sexes for each religion will be found in Table No. VII appended to the present work. The age statistics must be taken subject to limitations, which will be found fully discussed in Chapter VII of the Census Report. Their value rapidly diminishes as the numbers dealt with become smaller; and it is unnecessary here to give actual figures, or any statistics for *tahsils*. The figures given on the next page show the distribution by age of every 10,000 of the population according to the Census figures.

Age, sex, and civil
condition.

Chapter III, A.

Statistical.

Age, sex, and civil condition.

3-4	1,026
4-5	925

missioner wrote as follows in his Census Report for the district:—

"The considerable number of single adult males is due to the fact that the lower castes, such as Játs, Gújars, Ahírs, &c., are poor; and as it is customary among those castes for the parents of the girl to require the payment of a considerable sum of money by the bridegroom before a marriage can be effected, it is necessary that a man should acquire the means of paying for his wife before he can afford to marry, and hence marriage amongst these classes is either put off to a late age, or the men remain unmarried; while husbands are found for the women amongst the more wealthy people of neighbouring States. The castes among which *karewá* is permitted are the Játs, Vishnoís, Kahárs, Gújars, Ahírs, Málís, Dogars, Ráíns and Luhárs, and these classes usually marry at a mature age. Among these castes too, it is customary to take money for the daughters, while the Rájpúts, on the other hand, give large presents of clothes and jewelry with their daughters. The Vishnoís differ from the others as regards *karewá* marriages, in that, such marriages can only be contracted with a woman of the same caste, whereas amongst the other castes named above, *karewá* marriages may be contracted with a stranger, should there not be a woman of the same caste available."

Table No. XII shows the number of insane, blind, deaf-mutes, Chapter III, B.

Infirmity.	Males.	Females.
Insane	4	3
Blind	48	59
Deaf and dumb	9	6
Leprous	5	...

and lepers in the district for each religion. The proportions per 10,000 of either sex for each of these infirmities are shown in the margin. Tables Nos. XIV to XVII of the Census Report for 1881 give further details of the age and religion of the infirm.

Religious and
Social Life.
Infirmities.

The figures given below show the composition of the Christian population and the respective numbers who returned their birth-place and their language as European. They are taken from Tables Nos. IIIA, IX, and XI, of the Census Report for 1881:—

European and Eura-
sian population.

Details.		Males.	Females.	Persons.
Races of Christian population	Europeans and Americans...	25	16	41
	Eurasians	4	4	8
	Native Christians	5	1	6
	Total Christians	34	21	55
Langu- age.	English	31	20	51
	Other European languages...
	Total European languages...	31	20	51
Birth- place.	British Isles	7	5	12
	Other European countries...	1	...	1
	Total European countries...	8	5	13

But the figures for the races of Christians, which are discussed in Part VII of Chapter IV of the Census Report, are very untrustworthy; and is it certain that many who were really Eurasians returned themselves as Europeans.

SECTION B.—RELIGIOUS AND SOCIAL LIFE.

The dwellings of the country people, as elsewhere, are mere hovels, built generally of mud; where the soil is not of sufficient consistency for building purposes, a few thatched poles, often without doors, form the only semblance of a house in a native village. The shop-keepers' houses are, as a rule, somewhat superior. In the houses of the poorer classes, a bed (*chárpaí*) or two, and a few earthen vessels, form the sole furniture. The better class of peasant proprietor and the village shop-keeper will own a few vessels of brass or copper, but with this exception there will not be found any very great differences in the style of furniture. Houses divided into separate rooms are very rare.

Houses.

Chapter III, B.

Religious and
Social Life.

Dress.

The only peculiarity worthy of note in the dress of the people of the district is, the winter raiment of the Bishnoi women, which consists of a woollen wrap or *orhna* which covers the head and falls below the knee, a boddice or *angarkha* of cotton cloth, and a woollen petticoat called *dhubla*.

Food.

The staple food of the district is spiked millet (*bājra*) and *moth*. These, in ordinary years, form almost the sole food of the rustic population, except in the canal villages, where wheat and rice are grown. Here even the coarser grains are more commonly consumed by the people themselves, the better kinds being taken to the market. The towns-people, too, and the better class of shop-keepers eat wheat. Vegetables form an important article in the people's diet, while sugar and *ghi* (clarified butter) are retained for great occasions, and only indulged in as a treat. The ordinary time for eating is at about nine or ten in the morning, and eight or nine at night; but there can scarcely be said to be any fixed rule, for the men working in the fields often refresh themselves at odd hours, or

take their food whenever they find it most convenient with regard to the exigencies of their daily toil. In a note regarding the food of the people furnished by the district authorities for the Famine Report of 1879, the average annual consumption of food-grains by a family consisting of a man and wife, two children, and an old person, was estimated to be as shown in the margin.

Grain.	Agriculturists.	Non-agriculturists.

General statistics
and distribution of
religions.

Table No. VII shows the numbers in each *tahsil* and in the whole district who follow each religion, as ascertained in the Census of 1881, and Table No. XLIII gives similar figures for towns. Tables Nos. III, IIIA, IIIB of the Report of that Census give further details on the subject. The distribution of every 10,000 of

Religion.	Rural population.	Urban population.	Total population.
Hindu ...	7,707	7,153	7,624

Jain ...	38	195	62
Musalman	2,215	2,459	2,251
Christian	6	1

the population by religions is shown in the margin. The limitations subject to which these figures must be taken, and especially the rule followed in the

classification of Hindús, are fully discussed in Part I, Chapter IV, of

Sect.	Rural population.	Total population.
Sunnis ...	998	998
Shiahs ...	0.3	0.3
Others and unspecified	2.2	1.8

the Census Report. The distribution of every 1,000 of the Musalman population by sect is shown in the margin. The sects of the Christian population are given in Table No. IIIA of

the Census Report; but the figures are, for reasons explained in

Part VII, Chapter IV, of the Report, so very imperfect that it is not worth while to reproduce them here. Table No. IX shows the religion of the major castes and tribes of the district, and therefore the distribution by caste of the great majority of the followers of each religion. A brief description of the great religions of the Punjab and of their principal sects will be found in Chapter IV of the Census Report. The religious practice and belief of the district present no special peculiarities; and it would be out of place to enter here into any disquisition on the general question. The general distribution of religions by *tahsils* can be gathered from the figures of Table No. VII; and regarding the population as a whole, no more detailed information as to locality is available. The Muhammadans are chiefly found in the Fatehábád and Barwála *tahsils*, where they form more than a third of the whole population.

Chapter III, B.

Religious and Social life.

General statistics and distribution of religions.

The Hindu gods most worshipped appear to be Vishnu, Mahádeo, Durga, Ganesh and Sítla; while among the inferior deities, Hanumán comes in for a large share of adoration. He is especially worshipped at Bhiwáni. But perhaps the greatest favourites are Gúga Pír and the frontier saint Sakhi Sarwar Sultán, who is largely worshipped especially near Fatehábád, under the name of Lakhdátá. Both these, though Muhammadan saints, are extensively revered by Hindús and Musalmáns alike. The month especially sacred to Gúga Pír is that of Bhádon (August and September). A branch of peacock's feathers bound upon a pole forms the object of adoration at fairs held in his honour. Sir Henry Elliot gives an interesting account of this saint, from which the following is abridged:—

“The local tradition respecting him is that he was the son of a Chauhán Rájput, called Vachá, according to some; according to others, Jewar, whose wife Bachal, a Túar, produced him, after being long barren, at the kind intercession of Gorakhnáth. There is a clan of Musalmán Chauháns even now resident in the neighbourhood of his tomb; the Gúgáwats of the desert are descended from him, and the Gúgadeo-ka-thal is called after his name. His territory extended from Hánsi to the Garra (Ghara), and his capital was Mehera on that river. In a quarrel about land he killed his two brothers, on which account he drew down upon himself the anger of his mother. To escape here imprecations, he fled to the *jangals*, and there wished that the earth might open and swallow him up, but a voice from heaven declared that he could not have the satisfaction of being buried alive, horse and all, unless he uttered the *Kalema* and became a Musalmán. He appears to have had no difficulty in doing this, upon which the earth opened before him, and he leaped into its bosom. His claims to saintship are not very distinct. He is said to have been a contemporary of Pirthí Rája, and to have fought with desperate valour against the Muhammadans; but there is more reason to suppose that he must have contended with the earlier Ghaznvide monarchs, for several favourite ballads relate how he fell with his forty-five sons and sixty nephews, opposing the great Mahmúd on the banks of the Garra. In the eastern portion of these provinces (the North-West Provinces), where distance overcomes the zeal for pilgrimage, it is usual for the Bhangis to carry round the sacred symbols of the Pír in the month of Bhádon,

Chapter III, B.

General statistics
and distribution of
religions.

and to raise contributions. The Aggarwála Baniás are particularly sought after on this occasion. Their original emigration from Agroha, beyond Hariána, was no doubt once considered a sufficient reason why the symbols of their illustrious countryman, Gúga, should be paraded before their eyes. But perhaps few in these times have ever thought why the Aggarwálas are supposed to be, more than any other class, especially favourable to Gúga, and the present continuance of the ceremony on the return of the proper season, after all knowledge of its origin has utterly faded from remembrance, shows the marvellous permanence which usages, in themselves puerile, will sometimes attain when they are commemorative of an historical fact."

The goddess Devi is worshipped most commonly under the name of Sítla, or small-pox. Her shrines are found everywhere throughout the district, and are visited with the hope of averting small-pox. The principal shrine is at Dhanána, about 15 miles south of the town of Hási. From 1,000 to 1,500 persons attend a yearly fair at this place in the month of Chait (March-April). The Bishnoís are separately described below (pages 37, 38).

Religious gatherings.

The religious gatherings of the district are numerous, but none are frequented by strangers from a distance. Some have been already alluded to. Of the others only the following require notice:—At Hási there is a fair known as *Kutab Sháh ka Mela*, held in the month of Sánwan (July-August), and another, called *Mirán Sahib ka Mela*, held in the month of Chait (March-April), but the concourse of people is not large. A fair called *Devi ka Mela* is held half-yearly in the villages of Banbhauri, Umra and Deosar. At Dhanána, a *Sítla Mela* in honor of Devi Sítla (small-pox) is held once a year in the month of Chait (March-April); and at Karmára in the Fatehábád *tahsil* a fair called *Sheoratri ka Mela* is held in Phágan (February-March). At this gathering Mahádeo is the object of worship. The fair is said to date from the time of Yudishtara. The present temple was erected in 1824 by one Hari Singh of Patiála.

Language.

Table No. VIII shows the numbers who speak each of the principal languages current in the district separately for each *tahsil* and for the whole district. More detailed information will be found in Table No. IX of the Census Report for 1881; while in

Language.	Proportion per 10,000 of popu- lation.
Hindustáni	7,849
Bágrí	1,107
Punjabi	1,042
All Indian languages ...	9,999
Non-Indian languages ...	1

Chapter V of the same report the several languages are briefly discussed. The figures in the margin give the distribution of every 10,000 of the population by language, omitting small figures. Punjabi is spoken chiefly in the north and Bágrí in the south of the district.

Education.

Table No. XIII gives statistics of education as ascertained at the Census of 1881 for each religion and for the total population of each *tahsil*. The figures for female education are probably very

Males.	Education.	Rural population.	Total population.

license tax for each year since its imposition. The distribution of licenses granted and fees collected in 1880-81 and 1881-82 between towns of over and villages of under 5,000 souls is shown below:—

	1880-81		1881-82.	
	Towns.	Villages.	Towns.	Villages.
Number of licenses ...	293	278	274	273
Amount of fees ...	7,465	3,540	5,835	3,505

But the numbers affected by these taxes are small. It may be said generally that a very large proportion of the artisans in the towns are extremely poor, while their fellows in the villages are

Chapter III, C.

Tribes and
Castes.Poverty or wealth
of the people.

scarcely less dependent upon the nature of the harvest than are the agriculturists themselves, their fees often taking the form of a fixed share of the produce; while even where this is not the case, the demand for their products necessarily varies with the prosperity of their customers. Perhaps the leather-workers should be excepted, as they derive considerable gains from the hides of the cattle which die in a year of drought. The circumstances of the agricultural classes are discussed below at pages 44, 45. It is estimated that the ordinary household expenditure of a peasant family in easy circumstances averages from Rs. 8 to 10 per month, while that of a shop-keeper would be as much as Rs. 15 or 20. The ordinary peasant is certainly not so well off as the small shop-keeper, who generally manages to turn a monthly profit at least equal to his expenditure of Rs. 20; while if he is rich enough to turn money-lender, even on the smallest scale, his profits are considerable. It is estimated that in Chak Bāgar it would require a holding of 60 acres, or in the Hariāna and Nāli Chak a holding of 30 acres, to bring in a net income of Rs. 8 to a peasant proprietor. Loans are principally conducted through the village *baniās*, each of whom has his circle of clients in his own and a few neighbouring villages. The rates of interest vary from 12 per cent. per annum to 37½ per cent. It is always calculated monthly. The peasantry are reported to be much in debt.

SECTION C.—TRIBES AND CASTES.

Statistics and local
distribution of tribes
and castes.

Table No. IX gives the figures for the principal castes and tribes of the district, with details of sex and religion; while Table No. IXA shows the number of the less important castes. It would be out of place to attempt a description of each. Many of them are found all over the Punjab, and most of them in many other districts, and their representatives in Hisār are distinguished by no local peculiarities. Some of the leading tribes, and especially those who are important as landowners or by position and influence, are briefly noticed in the following sections; and each caste will be found described in Chapter VI of the Census Report for 1881. The Census statistics of caste were not compiled for *tahsils*, at least in their final form. It was found that an enormous number of mere clans or sub-divisions had been returned as castes in the schedules, and the classification of these figures under the main heads shown in the caste tables was made for districts only. Thus no statistics showing the local distribution of the tribes and castes are available. The annexed table, taken from the Settlement Report of 1864, shows the distribution of proprietary right throughout the district among the various tribes, as well as the amount and proportion of revenue paid by each.

No.	Tribe.	No. of villages belonging to			Revenue.			Per cent.		REMARKS.

Total ..		395	264	659	1,88,298	2,42,946	4,31,244	

Note.—35 Rohtak villages are also included in this. This shows all villages and total *jama*.

The following are the principal Ját tribes, returned in the Census of 1881 :—

Bainiwal ..	3,726	Sángwán ..	2,263
Bágrí ..	872	Ghatiwal ..	2,392
Bhullar ..	1,571	Gondal ..	1,437
Pawania ..	7,278	Nain ..	1,074
Cháhil ..	1,377	Soran ..	4,590
Chauhán ..	677	Kálarwán ..	3,004
Dallál ..	1,531	Godára ..	2,531
Sahráwat ..	617	Mor ..	1,249
Sidhu ..	916	Dulán ..	1,784

The Játis of Hisár are of two distinct classes—the Deswála or Desi Játis and the Bágrí Játis. These classes are included in the Census returns without distinction. The Bágrí Játis derive their name from the tract known as Bágar, just beyond the border in Bikáner. They appear at one time, according to Sir H. Elliot's Glossary, to have been a "tribe of great consideration, as we find "a Bágrí Ráo mentioned by Chand Bardái as accompanying "Pirthi Rája. They seem to have been originally Rájputis, but are "now held to be an inferior tribe, and are usually denominated "Játis." The Bágrís are found in the greatest numbers in the western portions of the district, to which they flocked in numbers to take up the lands left deserted after the *chálisa* famine, as soon as the extension of British rule rendered colonization secure. They are good and careful agriculturalists, and make the utmost possible use of the scanty advantages afforded by the inhospitable sands in which their lot is cast. Only a few families have penetrated into the Hási and Barwála *tahsils* as proprietors, but

* For an account of this tenure, see pp. 39, 40.

Chapter III, C.

Tribes and Castes.

Statistics and local distribution of tribes and castes.

Játis.

Chapter III, C.

Tribes and
Castes.

Játs.

as tenants they are not unfrequently met with. The Deswála Játs are to be found principally in the eastern portion of the district, in the *tahsils* of Hánsi and Barwála. These parts having been less affected by the famine of *san chálisa*, the old proprietary body held their own, clinging through everything to their ancestral lands. The Bágri immigration did not extend, therefore, to this part of the district, and such new settlers as there are were chiefly immigrants from the Sikh States. These Játs, like all their tribe, are hard-working and industrious; they are cultivators *par excellence*. Men and women alike devote themselves to field labour with the most unremitting ardour, the women yielding only to their husbands in such work as involves the employment of bullocks, such as ploughing or drawing water; for they look upon it as improper for a woman to drive a bullock. Most of them are Hindús or Sikhs. The Deswála and Bágri Játs, between them, hold 310 villages in the district out of a total number of 659, and pay 51 per cent. of the total land revenue.

Rájpúts.

The following are the principal Rájpút tribes, returned at the Census of 1881:—

Bhatti	3,775	Játu	4,074
Bágri	5,647	Chanhán	6,910
Punwár	4,301	Raghbansi	1,615
Túnwár	6,102	Saroya	1,350
Joya	1,533	Sekra	1,705

The classification of Rájpút tribes in this part of the country is somewhat confused by a peculiar local use of the word Rángghar. Properly speaking, the term denotes Rájpúts who have been converted to Muhammadanism. In Hisár, however, the name is applied indiscriminately to all Rájpúts, both Hindú and Muhammadan.* It is so used in the Settlement Report of 1840, from which one who did not know this peculiar use of the word would gather that the whole Rájpút population belonged to a particular tribe named Rángghar, the truth being that the term locally includes all Rájpúts alike, irrespective of tribal divisions. The officer who conducted the settlement of land revenue in 1860, himself a native, classifies the Rájpúts of the district into two main divisions—Túnwárs and Bhattís. There are, he says, other Rájpút classes to be met with in a few villages, but all are more or less connected with these two classes. The Túnwár Rájpúts apparently once held the whole western portion of the district from Bhiwáni to Agroha, and had extended their possessions as far south as Kanaund. The present representatives of the clan boast of a time when their ancestors were owners of 1,440 villages; now, however, in all this tract, they retain possession of only five or six villages, having been driven from their homes by the *chálisa* famine, and supplanted by the immigration of Bágri Játs from the west. Some members of the tribe acquired in former days the titles of Rái and Ráná, and during the Mutiny of 1857 the holders of these titles at once revived their pretensions and declared their independence. In the eastern portion of the district the Túnwárs held their own throughout

* The term Rángghar never denotes any particular tribe. See Races, North-West Provinces (Beame's), I. p. 4.

the famine. The Rájput of Hisár is described as indolent, and extravagant in his habits. He makes a good soldier, but a most indifferent cultivator, while his real *forte* lies in cattle-lifting.

The Bhatti Rájputs are of the Yadúbansi stock, and trace their descent from the same Jaisal who is the ancestor, by a left-handed marriage, of the Ját Sikh Rájás of Patiála, Jínd and Nábhá. Jaisal is said to be the son of one Rasálu, a descendant of Bhatti, or Bháti, a Gadbaun Rájput, who at some distant period emigrated from Mathra to this part of the country. Jaisal raised himself to a position of some importance, and became the founder of the city and State of Jaisalmer in Rájputána. He is said, however, to have been expelled from his newly founded State* towards the end of the 12th century, and to have settled in Hariána. His grandson, whose name is variously spelt Jumra or Jandra, had 21 sons, the ancestors of 21 tribes. Among other places, Jandra founded the town of Abohar in Sirsa, and there was born Dhúm, the ancestor of the Bhatti chiefs, with whom the English came in contact in 1810 and 1818. About a hundred years after the expulsion of Jaisal from Jaisalmer, in 1285, Bersi, the son or grandson of Dhúm, seized the celebrated fort of Bhatner. Whether or no this fort took its name from the Bhatti tribe is a moot point. Native tradition says that the name originally was Bharatner, and that it was founded by one Rája Bharat. The only reason for preferring to accept this derivation, rather than the more obvious derivation from the Bhattís, is that it is less likely to have been invented. However this may be, there is no doubt that the first Bhatti chieftain who established himself at Bhatner was Bersi. The story is that the fort had been neglected for many years, had fallen to ruin, and was in the hands of some Ját marauders. At length, in the reign of Násir-ud-dín Mahmúd (1246—1266) it was restored, as a barrier to the inroads of Afghán and other invaders; the fort of Batinda, 40 miles to the north-east, and now in Patiála territory, being restored at the same time. At this period Zangez Khán was in charge of the *Súba* of Lahaur. He was assassinated by order of Ghayás-ud-dín Balban, who succeeded Násir-ud-dín on the throne of Dehli; and it was in the confusion that followed that Bersi succeeded in occupying the fort of Bhatner. The fate of Bersi is variously narrated. Sir Henry Elliot's Glossary relates that the son of Bersi was, after his father's death, compelled to sustain three several attacks of the Muhammadans, and on the third occasion was reduced to such straits as to be obliged to consent to conversion as the condition of retaining his conquest. On the other hand, the Settlement Officer of the district relates most circumstantially that Bersi held the fort till 1331, when a force being sent against him from Dehli, his sons took part against him and caused him to be assassinated. One of these sons, by name Bhairu, curried favour by becoming a Musalmán, and was left in charge of the fort, Bhairu's descendants for four generations continued to hold Bhatner; but at last Fateh Khán, the reigning chief, becoming turbulent, was expelled by a force sent for his reduction by Bahlol Lodi, whose reign commenced in 1450. The Bhatti rule

The Bhattis.

at Bhatner thus lasted for about 160 years. Fateh Khán, after his expulsion, retired in the direction of Sirsa, and betook himself to agricultural pursuits; nor do his descendants again emerge into notice until the reign of the Emperor Muhammad Sháh (1719—1748). In this reign Sháhádád Khán, *názim* of Hariána, married a daughter of Muhammad Hasan Khán and procured the grant of certain estates to his father-in-law. Hasan Khán was succeeded by his son Muhammad Amín Khán, and this chief in turn, gaining influence by marrying a daughter to the celebrated Najíb-ud-daula, procured the title of Nawáb and was appointed *názim* of Hariána. This was a time of disaster for Hariána. What with the incursions of the Sikhs from abroad, and the internal fights and forays of the Bhattis and other wild tribes, the whole country was devastated until, it is said, only eight inhabited villages existed between Hisár and Sirsa.

Nawáb Amín Khán died some years before the English conquest of the Marahátas in 1803, and was succeeded by his two sons—the Náwabs Kamar-ud-dín and Khán Bahadar Khan. After a while these brothers divided the Bhatti territory; Fatehábád fell to Khán Bahádár Khán, and Sirsa and Rániya to Kamar-ud-dín. The latter died not long after the separation, and was succeeded by his son Nawáb Zabta Khán. The Bhatti chiefs, though nominally becoming subjects of the English Government in 1803, in fact maintained their independence for several years. Khán Bahádár Khán was the first to fall, his territory being confiscated in 1810. He afterwards obtained a life pension of Rs. 1,000 per month, and some representatives of his family who still reside at the village of Májra are recorded as proprietors of two or three villages. Nawáb Zabta Khán, by a timely submission, escaped punishment in 1810. His turn, however, came in 1818, when, as has been already related, his estates were confiscated. A pension of Rs. 1,000 per month was granted to him for life, which he held until 1827, when it descended, reduced to Rs. 500, to his son Ghulám Faríd Khán. Ghulám Faríd died at Rániya in 1847, and his pension was divided; Rs. 200 per month were given to his son Mír Samad Khan, and the remainder to other members of the family. In the Mutiny of 1857, however, the spirit of the Bhatti blazed up. Mír Samad Khán proclaimed himself independent, plundered Sirsa, and made incursions in various directions. After the suppression of the Mutiny, he, together with his uncle, Gauhar Ali Khán, was apprehended. Both were tried and hanged, and the family pension, with the exception of small life stipends to the wife and mother of Mír Samad Khán, was finally confiscated.

The Bhattis of the present day are all Muhammadans. The date of their conversion is differently attributed to the reign of Akbar and the reign of Taimúr. The most probable epoch, however, of the change is the conquest of Bhatner in the time of Bersi at the end of the 13th century, as it is clear that either Bersi himself or his son Bhavin accepted the creed of Islám as the price of retaining Bhatner. In character there is little to distinguish the Bhattis from their Rájput neighbours already described.

Together with the Túnwár Rájputés they hold 59 villages in this district.

Another section of the Rájputés of the district is often confused with the Bhattís. These are the Pachhadas or "men of the west,"* who are also called Bhattís as inhabitants of Bhatiana. They have still another name, that of *ráth* or "hard-hearted," which they owe to the heartless cruelty of their violence in bygone days when they ravaged the country under Bhattí leaders. The term *pachhada* is purely relative, and in various parts of the Panjáb and Northern India is applied to totally different tribes, but always in reference to a western origin, and generally as a distinctive appellation of later immigrants from the west. A very little to the south of Hariána, in the neighbourhood of Dehli, the term is extensively applied to later immigrations of Játés. In Hisar, however, the appellation is the peculiar heritage of a degenerate race of Rájputés, distinct on the one hand from the Rájput tribes to which they trace their origin, and on the other hand from the Játés, upon whom they look as social inferiors. There are four principal clans of Pachhadas, named respectively Sukera, Sahu, Hinjraon and Chotia or Bhanka. Each clan claims Rájput origin, the second and fourth from the Chauhan Rájputés, and the first and third respectively from Túnwárs and Saroha Rájputés. The Pachhadas are pastoral in their tendencies, and are not good cultivators. Prior to British rule they were professional plunderers, acting usually in concert with the pure-born Bhattís; and on the introduction of order under the British rule, they became cultivators more from necessity than choice. They hold 19 villages in the district. They are said to be all Muhammadans.

Another class requiring special mention in the district is that of the Bishnois, a religious sect which took its rise during the 15th century A.D. The legend told of the founder is as follows:—He was born in 1451 at Pípasar in Bikáner, of the family of Punwár Rájputés. When a lad of five years old, he used to take his father's herds to water at the well, and had for each head of cattle a peculiar whistle, which it knew and recognized; at the sound of his whistle, the cows and bullocks would come one by one to the well, drink and go away. One day a man, named Udaji, happened to witness this scene, and, struck with astonishment, attempted to follow the boy when he left the well. He was on horseback and the boy on foot, but, gallop as fast as he would, he could not keep up with the walking pace of the boy. At last, in amazement, he dismounted and threw himself at his feet. The boy at once welcomed him by name, though he then saw him for the first time. The bewildered Udaji exclaimed "*Jámbhaji*" (omniscient), and henceforth the boy was known by this name. On attaining manhood, Jámbhaji left his home, and, becoming a *fakir*, or religious mendicant, is said to have remained seated upon a sand hill called Sámratthal, in Bikáner, for a space of 51 years. In 1485 a fearful famine desolated the country, and Jámbhaji gained an enormous number

Bishnois.

of disciples by providing food for all that would declare their belief in him. He is said to have died on his sand hill, at the good old age of 84, and to have been buried at a spot about a mile distant from it. His tomb remains to this day, and twice in the year is the scene of a well-attended fair. Jám bhaji is worshipped by his followers as an incarnation of Vishnu. Their tenets in most points do not materially differ from those of orthodox Hindús. Some peculiarities, however, deserve notice. They do not burn their dead, but bury them in a sitting posture, in the floors of their houses or of the family cattle-shed. They abhor tobacco, considering it unclean, and the mere touch of it polluting. Their marriage ceremony is a curious mixture of Hindu and Muhammadan rites, passages from the Kurán and the Shastars being indiscriminately recited during its progress. They avoid taking life of any sort, and, should any animal be accidentally killed, they bury it. The Bishnois are found also in some numbers in the Sirsa district. Here, in Hisár, they hold 10 villages as proprietors. They are said to be mostly either Játs or Tarkháns (carpenters) by origin. They are good cultivators, and of thrifty, careful habits. They prefer camels to cattle, using them even for agricultural purposes.

Baniás.

There are 37 villages in the district owned by Baniás, but they appear to require no special mention, beyond the fact that the town of Agroha in this district is said to be the original seat of the great Aggarwála sub-division of the Baniá caste, to which almost all the Baniás of the district belong. The Aggarwáls are said to be descended from one Rája Uggar Sain, the founder of Agroha. On the capture of Agroha by Sháháb-ud-dín Ghauri, the Aggarwáls emigrated to all parts of India.

Bráhmans.

The Bráhman caste is represented in the district by Gaur, Sársút and Gujráti Bráhmans; also by a clan locally known as Khandelwáls, who assert that they came originally from Nathila. But the vast majority are Gaurs. These branches are all separated from the other by caste prejudice, and will not eat or smoke together. Each of the tribes mentioned is represented among the agriculturalists of the district, and, together, they are recorded as owning 15 villages. The rustic Bráhmans are said to think much less of the caste distinctions between their several sub-divisions than do the dwellers in the towns. The Sársút Bráhmans are said to eat meat, and are altogether not so particular as the Gaur Bráhmans. They will take charity from castes from whom the Gaur Bráhman would refuse it. Some few of the Gaur Bráhmans belong to the Tagá sub-division. They state that they were brought into the district by Rája Janamájaya for the purpose of exterminating snakes,—a tradition which Sir H. Elliot explains by supposing it to refer to wars waged against a Scythian race, the founders of the serpent dynasties of northern India.

SECTION D.—VILLAGE COMMUNITIES AND TENURES.

Table No. XV shows the number of villages held in the various forms of tenure, as returned in quinquennial Table No. XXXIII of the Administration Report for 1878-79. But the accuracy of the figures is more than doubtful. It is in many cases simply impossible to class a village satisfactorily under any one of the ordinarily recognised tenures; the primary division of rights between the main sub-divisions of the village following one form, while the interior distribution among the several proprietors of each of these sub-divisions follows another form which itself often varies from one sub-division to another. The village communities of the district are all of the standard *zamíndárí*, *pattidárí* and *bhayáchára* types, the last named being by far the most prevalent. The *zamíndárí* tenures are for the most part in villages which were farmed out when in a deserted state, and were peopled and brought under cultivation by the exertions of the farmer. In such cases the proprietary right of the farmer was recognized and confirmed at the time of Settlement. In other cases, the owners of the village are the ancient Ját or Rájpút proprietors, who, though ousted from the actual cultivation by recent settlers, have nevertheless retained such a footing in the village that their claims at the time of Settlement could not be overlooked. In the majority of cases, however, the ancient proprietors and recent settlers are found holding together on a footing of perfect equality, having, during the troublous times of the last century, been so completely amalgamated that it could not be said that one class was proprietor to the exclusion of the other. In such cases, old proprietors and more recent settlers have been treated as one community, and dealt with as a corporate whole, the tenure being technically described as *bhayáchára*. Occasionally a small sum has been awarded to the old inhabitants from the recent settlers, as a recognition of their rights, but ordinarily the revenue is distributed over all by an equal rate.

Village Commu-
nities and
Tenures.

Village tenures.

Table No. XV shows the number of proprietors or shareholders and the gross area held in property under each of the main forms of tenure, and also gives details for large estates and for Government grants and similar tenures. The figures are taken from the quinquennial table prepared for the Administration Report of 1878-79. The accuracy of the figures is, however, exceedingly doubtful; indeed, land tenures assume so many and such complex forms in the Punjab that it is impossible to classify them successfully under a few general headings.

Proprietary tenures.

The *sukhlambarí* tenures of Hisár and Sirsa were created in 1819 by the grant of waste lands to the officers and men of nine disbanded cavalry regiments, for whom some provision was required. The lands were granted in holdings, varying according to the rank of the recipient, from 300 to 60 acres, and were to be held revenue-free for three lives. On failure of the third life, the estate was to be brought under assessment and settled with the heirs of the original *sukhlambar*, succession being

nities and
Tenures.

Sukhlambars.

regulated by Muhammadan or Hindu law, as the case might be. The persons to whom these grants were made were for the most part residents of other districts, and have left the cultivation in the hands of tenants. The original number of *sukhlambars* was 636 holding 30 whole villages and plots in 3 more. Most of the allotments have now fallen in, and, having been assessed with land revenue, are held by the descendants of the original recipients on the footing of ordinary proprietors, or rather on that of *málik kabzá*s, as the *sukhlambar* has no share in the common property of the village.

The Skinner family.

The Skinner family owns large estates in the Dehli territory and the North-West Provinces. Its holdings in this district are shown in the tribal table on page 33 under the head "Christians." Colonel James Skinner, the founder of the family fortunes, was born in 1778. His father was a native of Scotland in the Company's service, and his mother a Rájputni, from the neighbourhood of Banáras. In 1796 he took service in the Maráhta army under General De Boigne. He soon distinguished himself, and rose to an independent command. He took an active part in the endless campaigns of the period, and was serving under General Perron at the commencement of the campaign against the English, which ended in the conquest by the latter of the Dehli territory. Some English officers in the Maráhta service having refused to act against their countrymen, General Perron dismissed all officers of English blood in his army. Skinner, with several companions, reluctantly claimed protection from Lord Lake. He was well received, and offered a commission in the English army. This he at first refused, being unwilling to serve against Sindhia or General Perron. After the battle of Dehli, however, he accepted the command of a body of horse, on the express stipulation that he should not be employed against Sindhia. He distinguished himself no less under the English than under his former master, and before his death acquired a considerable reputation as a leader of irregular horse. The estates now owned by the family were in part granted to him from time to time by way of reward for services; the remainder was acquired by purchase. He died in December 1841, leaving five sons, Joseph, James, Hercules, Alexander and Thomas. By his will the property remains undivided, being managed by one member of the family on behalf of the remainder. The present manager is Mr. Alexander Skinner, the fourth son. The other sons are all dead. The management of the estate is conducted principally at Hánsi, in this district.

Tenants and rent.

Table No. XVI shows the number of tenancy holdings and the gross area held under each of the main forms of tenancy as they stood in 1878-79, while Table No. XXI gives the current rent-rates of various kinds of land as returned in 1881-82. But the accuracy of both sets of figures is probably doubtful; indeed, it is impossible to state general rent-rates which shall even approximately represent the letting value of land throughout a whole district.

Kirsán kádim.

The relation between proprietor and tenant in this district is entirely the growth of the present century, and is marked by peculiarities which owe their origin to the depopulation of the

villages in the famine of 1783. The paucity of cultivators induced the original proprietors to associate immigrants with themselves on most favourable terms; the pressure of the revenue, on the other hand, and of fines under the track laws,* which in the early part of the century were rigorously enforced, caused many, who of right were proprietors, to procure the entry of their names in the village records as cultivators only. From these causes it was found at the time of Settlement that a large number of cultivators existed who could not rightly be classed as proprietors, as they had no share in the village common; and could not, on the other hand, be styled tenants, as they paid no rent, and had the right of selling their holdings. Such persons were locally known as *kirsán kadim*. They are now recognized as proprietors of their holdings, and correspond in almost every particular with the class known in other districts as *málik kubza*. They have complete proprietary right over their holdings, pay revenue on them upon equal terms with the full proprietors, and can sell or mortgage them with no further restraint than results from the general custom of pre-emption. They have, however, no rights whatever in the village common, whether cultivated or waste, and if they use it for grazing purposes, have to pay a grazing tax at the same rate as ordinary cultivators and the non-proprietary classes generally.

The tenants proper of the district are locally known as *boladárs*. Here, as elsewhere, they are of two classes, hereditary (*maurúsi*) and non hereditary (*ghair-maurúsi*); the latter are popularly called *boladár-nar-sála*. The rules under which the status of tenants was decided at the time of the last Settlement were shortly as follows :—(1) Those who had held at fixed rates from a period prior to the Settlement of 1840; (2) those who had paid no more than the revenue assessed on their holdings for a period exceeding 12 years; and (3) those who had formerly been proprietors, but had lost proprietary right by voluntary or involuntary alienation, were recorded as hereditary. All others were recorded as tenants-at-will.

The figures in the margin show the numbers of headmen in the several *tahsils* of the district.

<i>Tahsil.</i>	Village headmen.

the prevention and detection of crime. The headmen, by way of remuneration, collect a cess of five per cent. called *pachotra* in

The principle of the track law is that if the tracks of a body of thieves are traced into a village, and not beyond it, that village becomes liable to a fine unless it can give up the offenders or prove that every effort to find them and give them up has been made.

addition to the revenue for which they are responsible. There are no chief headmen (*āla lambardār*) in the district; and *zaildārs* have not yet been appointed.

The village income, made up in the main of the rents of common lands, the sale of timber, &c., is swelled by certain village cesses, of which the following list is given by the Settlement Officer:—“*Ang charāī*.—Grazing dues levied upon the non-proprietary classes for the right to graze their cattle upon the village common. *Kūri-kamīnī*.—A hearth tax, levied at a rate usually of Rs. 2 per house upon all non-proprietary residents of the village. *Darānti-gandusi*.—Dues paid for the right to cut grass and *pala*. *Dholgoar*.—Marriage procession dues, generally Rs. 2. Besides these there is in many villages a small income derived from letting the right to construct and use saltpetre pans. The produce of these cesses is divided among the whole proprietary body.

Chaubāchhā

The *chaubāchhā* or fourfold rate is the name given to a mode, peculiar to this part of the country, of effecting the distribution over the individual members of a village community, of the sum levied by way of revenue upon it as a corporate whole. The process of distribution is usually left, as much as possible, to the community itself. The sum total of the assessment is announced, and the community, through its headmen, or *lambardārs*, is then consulted as to the manner in which the distribution is to be effected. The method of distribution differs with the tenure; where all the land is held in common (the *zamīndār's* tenure), no distribution is necessary. Where ancestral right forms the basis of the village economy, and each man's right and liability is regulated by his relation to a common ancestor (*pattidāri* tenure), then, each man's ancestral share being ascertained, the amount of revenue to be paid by him is deduced from that share. If, on the other hand (as is most commonly the case in this district), possession forms the basis for calculation of the rights and liabilities of the members of the community, each man's liability being proportionate to the amount of land in his possession (*bhayāchhāra* tenure), then the distribution is effected by rates calculated in various ways, but ordinarily having this in common, that the land is, in the main, made the basis of the calculation. Some of these modes of distribution are exceedingly complicated, and among them, perhaps, there was none more complicated than the *chaubāchhā*, now fortunately a thing of the past. Its peculiarity lay in the fact that it aimed at bringing within its operation not only the owners of land but also the whole community, including the shopkeeper, the weaver, the potter, and all the non-agricultural hangers-on of the village. In order to effect this object, the land was not made the sole basis of distribution, but a rate was also levied upon every head of cattle, upon every house, and upon every head of the population. It was, in fact, a combination of four rates. Given the total assessment, it was divided, according to the exigencies of the season, into four parts, each of which was raised by its own rate, one by a rate upon the land, another by a rate on the cattle, another by a rate upon the houses, and the fourth by a poll rate.

The object to be gained by this arrangement was that no one might escape altogether from contributing to the revenue, and yet that the greater share of the burden should fall upon the land. Thus, while the village shop-keeper and the village artizan fell under the two latter rates only, the owner of land fell under all four. This method was introduced into the Hisar district during the currency of the first 10 years settlement (1816—25) by Mr. Fraser, the Collector, in order, as he thought, to facilitate the collection of the revenue. There was, however, no fixed rule for regulating the proportion of the several rates; but each year, according as the season was good or bad, the amount to be levied by rate upon the land was increased or diminished according as the village authorities might determine, the other rates decreasing or increasing in proportion. This naturally gave rise to much injustice and oppression to the weaker members of the community. Attention was drawn to this fact by the Settlement Officer of 1840; and the system was so far modified that rates for the levy of grazing dues and the hearth-tax were definitively fixed, the power being removed from the *lambardárs* of arbitrarily increasing them. The *chaubáhhá*, thus modified, was still in vogue in a few villages up to the time of the Settlement of 1864. It has now been replaced by a rateable distribution of the assessment over the land alone. The relics, however, of the system are still extant in the grazing dues and rates already mentioned. The revenue is now distributed over the land alone, but the proprietors receive the dues, in deference to the custom which in former years relieved them of a portion of the burden of the revenue. The *chaubáhhá* was most prevalent in the Hānsi and Barwāla *tahsils*, where the original proprietors—Desi Jāts and Rājputs—held their own. In other parts of the district it was only introduced in the older villages held by the same classes, and not among the recent Bāgri and other settlers. The four items upon which the rate was levied are given as described by the Settlement Officers both of Rohtak and Hisar. The former officer gives the four headings as follows:—*Kúri*—a hearth rate payable by each separate family (*kúri* signifying a hearth). *Pag*—a poll rate payable by each grown up male (from *pagri*, a turban). *Ang*—a cattle or grazing rate (a buffalo being reckoned a full *ang* and generally taxed 1 rupee, and a cow half an *ang*, 8 annas). *Dharti*—(meaning soil) a rate upon the land.

Sir H. Elliot, in his Glossary, gives the heads somewhat differently. He describes the *chaubáhhá* as “a levy of revenue on four ‘things, under the ancient *regimé*, in the Dehli territory; namely, ‘*pag*, *tag*, *kúri*, or *kudí*, and *punchh*; i.e., *pagri*, a turban; *tag*, a ‘rag or thread worn by a child round its waist; *kúri*, a hearth; and ‘*punchh*, animals’ tails, as of buffaloes, bullocks, etc.

The following is a list of the menials usually found in the villages with their local names: carpenter (*khúti*), blacksmith (*luhár*), leather-worker, (*chamár*), barber (*nái*), potter (*kumhár*), water-bearer (*sakka*), sweeper (*churha*). These menials reside in the villages under the patronage of *lambardárs* and proprietors,

and by custom receive a certain portion of grain at harvest time. The amount is usually distributed on ploughs, and varies from 30 seers to 10 seers. Potters, carpenters and blacksmiths receive the largest shares. The *chumárs*, who are, as a rule, numerous in every village, receive the skins of all dead cattle in addition to their share of grain. Many members of these menial castes, and especially the *chumárs*, are also agriculturists, and cultivate plots of the village land as tenants-at-will of the proprietors.

The subject of the employment of field labour, other than that of the proprietors or tenants themselves, is thus noticed in answers furnished by the District Officer, and inserted in the Famine Report of 1879 (page 712):—

“It is customary for the agriculturists in the districts to employ hired field labourers; they are generally employed in weeding and harvesting, and receive two annas a day, and one meal. The persons usually so employed are *chumárs*, *dhanks*, *ahírs*, and *kumhárs*; they do not form a class by themselves, and are not dependent on field labour only, but earn their livelihood by handicrafts as well. The condition of such field labourers is not inferior in respect of their ability to subsist with fair ease from harvest to harvest in average years. They usually live on what they earn by field labour and handicraft, but in times of scarcity they look to the *zamindár* who is in the habit of employing them for assistance; besides what they earn by handicraft and field labour they also get from the village their allowance of grain as *hakk kamíní* at the end of each harvest.”

The wages of labour prevailing at different periods are shown in Table No. XXVII, though the figures refer to the labour market of towns rather than to that of villages.

The last two lines of Table No. XVI show the number of persons holding service grants from the village, and the area so held. But the figures refer only to land held free of revenue, which is by no means the only form which these grants assume. Sometimes the land is leased to the grantee at a favourable rent, or on condition of payment of revenue only; sometimes the owner cultivates and pays the revenue, making over the produce to the grantee; while occasionally the grant consists of the rights of property in the land, which, subject to the usual incidents, such as responsibility for revenue and the like, vest in the person performing certain specified services at such time and for so long as he performs them. These grants are most commonly made to village menials and watchmen on condition of, or in payment for, services rendered; to attendants at temples, mosques, shrines, or village rest-houses, so long as they perform the duties of the post; and for maintenance of monasteries, holy men, teachers at religious schools, and the like.

Table No. XXXII gives statistics of sales and mortgages of land; Tables Nos. XXXIII and XXXIIIA show the operations of the Registration Department; and Table No. XXXIX the extent of civil litigation. But the statistics of transfers of land are exceedingly imperfect; the prices quoted are very generally fictitious; and any figures which we possess afford but little real indication of the economical position of the landholders of the district.

The size of holdings varies with the nature of the country, being naturally largest in the wild sandy tracts to the west of the district. In *chak Bāgar* 250 acres would be considered a large holding for a proprietor. The average holding is about 125 acres, while very few have as little as 30 acres. In *chaks Nāli* and *Hariāna* the average area belonging to one proprietor is about 30 acres, while 75 acres would form a large holding. In these parts some proprietors hold as little as 18 or 19 acres. For a tenant in *chak Bāgar*, 60 acres would be a large holding; 18 would be considered very small, the average being about 32 acres. In *chaks Nāli* and *Hariāna* a large holding for a tenant would be 25 acres, a middle sized one 12½, and 6 acres a very small holding.

There are no families of note in the district. The following is a list of those entitled to a seat at *darbārs* :—

Mirza Hyder Beg, Raīs, of Hānsi; Lāla Sohan Lal, Treasurer, of Hisār; Lāla Rameshar Dās, Notary Public and Banker, of Bhiwāni; Sardār Khān, ex-Jamadar, Military Department, now a pensioner, Raīs of Hisār; Jairām Dās, Banker, Bhiwāni.

CHAPTER IV.

PRODUCTION AND DISTRIBUTION.

SECTION A.—AGRICULTURE AND LIVE-STOCK.

Chapter IV, A.
Agriculture
and Live-stock.
General statistics of
agriculture.

Table No. XIV gives general figures for cultivation and irrigation, and for Government waste land; while the rainfall is shown in Tables Nos. III and IIIA and IIIB. Table No. XVII shows statistics of Government estates. Table No. XX gives the areas under the principal staples, and Table No. XXI the average yield of each. Statistics of live-stock will be found in Table No. XXII. Further statistics are given under their various headings in the subsequent paragraphs of this Chapter. Land tenures, tenants, and rent, and the employment of field labour, have already been noticed in Chapter, III Section D.

The seasons.
Rainfall.

The total annual fall of rain and the manner in which it is distributed throughout the year are shown in Tables Nos. III, IIIA, IIIB. The table below shows the season of seed time and harvest for the principal staples:—

	Name in English or Latin	Name in Vernacular.	Season for sowing.	Season for reaping
Rabi	Wheat	Gandum ..	Katik and Maghar (October, November, December).	Balsakh (April-May).
	Barley	Jau	Do.	Do.
	Gram	Nakhud ..	} Asauj (September- October).	Chait (March-April).
	Mustard	Chana ..		Phagan (February- March).
Kharif.		Sarson ..	Do.	Katik (October- November).

	Sesamum	Til ..	Do.	Do.

Irrigation.

Table No. XIV gives details of irrigation. Further information will be found at pages 177 to 203 of Major Wace's Famine Report, compiled in 1878. At that time 5 per cent. of the cultivation was irrigated from canals, 0.11 per cent. from wells, 23 per cent. was flooded, and the remaining 72 per cent. was wholly dependent upon rain. The following figures show the number of wells then existing in the district, with certain statistics regarding them.

Number of wells.	DEPTH OF WATER IN FEET.		COST IN RUPEES.		BULLOCKS PER WHEEL OR BUCKET.		Cost of gear.	ACRES IRRIGATED PER WHEEL OR BUCKET.	
	From	To	Masonry.	Without masonry.	Number of pairs.	Cost in Rupees.		Spring.	Autumn.
522 822	20 30	30 40	2,000	200	2	100	18	4	6

The most usual depth of water below the surface is some 80 feet, but irrigation is not practised at this depth. All wells are worked by the rope and bucket. Of the 844 wells shown above, 428 are unbricked.

Table No. XXII shows the number of cattle, carts, and ploughs in each *tahsil* of the district as returned in 1878-79. The implements required to cultivate a small holding are a plough, a pair of bullocks, a *por* (or seed-sower), a *kassi*, a *sohdga*, or board for smoothing and levelling the furrows after grain has been sown; a *kulhari* or hatchet; a *daranti* for mowing long grass crops, &c.; a *khurpa*, for digging up grass; a *kasola*, for weeding; a *jeli*, or long wooden prong, for lifting and stacking the harvest; a *gandda*, or large coarse knife, for cutting *pila*; some rope and a wooden yoke. The ordinary cost of these implements represents a capital of perhaps Rs. 100. One plough is calculated to cultivate 18 acres of unirrigated and 9 acres of canal or *sotar* land.

The following description of the use of manure and the system of rotation of crops as practised in the district, was furnished for the Famine Report of 1879 (page 248):—

“Percentage of cultivated area which is manured:—

	Constantly manured.	Occasionally manured.	Not manured.	Total.	Percentage of previous column which bears two or more crops annually.
Irrigated land ..	2.85	7.06	90.09	100	14.90
Unirrigated land	100.	100	1.16
Total ..	0.16	0.38	99.46	100	0.89

“The average weight of manure given to the acre per annum on land constantly manured, is about 500 maunds. On land occasionally manured, the amount of manure per acre given is 200 maunds, and the interval at which it is given is six months. The usual course of cropping prevailing in this district is as follows:—The land is first ploughed, then harrowed, and after that seed is sown by the aid of the plough and tube. The unmanured lands in this district are the *bārāni*; the greater portion of it yields but one crop, which is the *kharif*, and is allowed to remain fallow for six months, and is seldom or never ploughed during that time. There is but a slight difference between the treatment of irrigated and unirrigated lands. The irrigated lands have to be ploughed and harrowed four times and manured as well, before seed is put down, and the greater portion of it yields but one crop (*rabi*). In some places the irrigated land is not allowed to rest, as vegetables, cotton, tobacco, &c., are always being sown.”

No improvements are noticeable in the quality of the crops or the mode of agriculture. The only change that has taken place since the time of British occupation of the country is the introduction of cotton cultivation. This has of late years been on the increase

Manure and rotation of crops.

Chapter IV, A.

Agriculture
and Live-stock.Manure and rotation
of crops.

Principal staples.

in the canal villages. The agricultural knowledge of the people is at a stand-still. Rotation of crops, though to a certain extent understood, as a rule, is not practised. It is never attempted except upon land which is capable of producing the superior and more valuable crops. Manure is used, but only in the cultivation of small plots near wells, or round the village site, set aside for vegetables and other garden produce.

Table No. XX shows the areas under the principal agricultural

Crop.	1880-81.	1881-82.
<i>Mash</i> (<i>Urad</i>) ..	4,377	4,434
<i>Mung</i> ..	26,770	34,710
<i>Masur</i>	81,100

<i>Kasumbh</i> ..	1,103	10
Other crops ..	81,364	5,554

staples. The remaining acres under crop in 1880-81 and 1881-82 were distributed in the manner shown in the margin. The staple products of the district are *bājra* (spiked millet); *jawār* (great millet); and gram (*cicer arietinum*). The latter is the only crop grown to any great extent for the spring harvest, and its cultivation is entirely dependent upon the seasons. Rice, wheat and barley are grown only upon land irrigated from the

canal or the Ghaggar, the first for the autumn, the two latter for the spring harvest. The other items of produce in the autumn harvest on unirrigated tracts are the common pulses *moth* (*phaseolus aconitifolius*), *māsh* (*phaseolus radiatus*), and *múng* (*phaseolus mungo*). Of drugs and spices, tobacco and coriander are grown to some extent for the spring harvest, and chillies for that of the autumn. The tobacco grown is probably not more than enough for local consumption, but coriander appears to be cultivated here more largely than in any other district. The oil-seeds, *sarson* (mustard), and *til* (*sesamum orientale*) are grown somewhat largely for the autumn harvest. Cotton also in favourable seasons is grown extensively as an autumn crop in canal villages.

Average yield. Pro-
duction and con-
sumption of food-
grains.

Table No. XXI shows the estimated average yield in pounds per acre of each of the principal staples as shown in the Administration Report of 1881-82. The average consumption of food per head has already been noticed at page 28. The total consump-

Grain.	Agricul- turists.	Non-agri- culturists.	Total.

Inferior grains ..	2,221,735	238,803	2,460,538
Pulses ..	455,064	238,803	693,857
Total ..	2,676,789	636,807	3,313,596

tion of food-grains by the population of the district as estimated in 1878 for the purposes of the Famine Report is shown in maunds in the margin. The figures are based upon an estimated population of 484,681 souls. On the other hand, the average consumption per head is believed to have been over-estimated. A rough estimate of the total production, exports, and imports of food-grains was also framed at the same time; and it was stated (page 151, Famine Report) that there was an annual average surplus of some nine lakhs of maunds available for export, consisting chiefly of *bājra* *múng*, *moth*, and gram, and sent to Bikāner, Jaipur, Jodhpur, and Dehli.

Table No. XXII shows the live-stock of the district as returned in the Administration Report at various periods. Haryana has always been famous for its cattle. A good specimen of the breed stands six feet high, and is a splendid animal. These bulls are for the most part white, with massive head and forehead, and a chest and back that would delight the eyes of an English farmer. A selected pair of these bullocks will now fetch as much as Rs. 400. They are bought by native gentlemen and merchants from all parts of Northern India. The Government cattle farm has done much to improve and perpetuate the breed. Bullocks, buffaloes and even camels are employed in agricultural operations. It is by no means uncommon to see camels drawing the plough. The price of an ordinary plough bullock is on an average about Rs. 50, and the lowest price Rs. 20. The price of a buffalo ranges from Rs. 10 to Rs. 30. Camels for burden fetch from Rs. 60 to Rs. 100. Sheep and goats are reared for wool, of which there is a large export, even more than for food, and their prices range from Rs. 3 to Re. 1 each. Milch-cows are worth from Rs. 15 to Rs. 50 and 60, and milch-buffaloes from Rs. 30 to Rs. 70 each. A recent estimate by the Deputy Commissioner states the stock of the district as follows:—Cows and bullocks 295,508; buffaloes 50,616; sheep 47,749; camels 17,001.

The principal fair of the district, in fact the only one at which it is officially estimated that more than 10,000 persons usually assemble, is the cattle fair held at the town of Hisar twice a year in March and October. The fair on each occasion lasts for 20 days, and the usual attendance is estimated at 25,000, of which number about 10,000 are estimated to be strangers from a distance. Food is obtainable from the local merchants, but no arrangements are made for housing the visitors. Large numbers of cattle are brought in for sale from Rájputána, especially from the Bágur country. Purchasers attend from all parts of the province, and from the direction of Saháranpur and Merat in the North-West Provinces, and a brisk business is always done. Year by year the fairs are increasing in importance and popularity. The municipality derive a considerable revenue from the dues collected, only one-tenth of which is credited to Government.

The Hisar farm dates from the year A.D. 1813, when it was instituted by Major Livingstone. The objects of the farm are, first, to breed bullocks of superior size and quality for ordnance purposes; and, secondly, to provide and to distribute generally for breeding purposes, high-class bulls. The locality is in every respect well chosen. The grazing lands, comprising an area of 6,763 square miles, or 43,287 acres, afford excellent pasturage for the cattle of good and nutritious grasses all the year round, except in seasons of drought; and numerous tanks scattered over the country give a full supply of drinking water. The district is noted for a breed of cattle called *Hariánáh*. Cross-breeding between cows of this sort and other kinds of good bulls is much practised. They produce powerful cattle for heavy draught. The pure breeds of cattle maintained in the farm are: Gújrát, Ungole, Nagore and Mysore. These breeds are good in themselves. It is with

Hisár Cattle Farm.

bulls of the first three kinds that the *Hariándh* cows are usually crossed. There is a constantly increasing demand for Hisár bulls for breeding purposes—an indication that their excellence is appreciated. They are certainly superior to the produce of any other farm. The farm lands lie east, west and north of the town of Hisár. The boundary is marked by masonry pillars. There are three farms, called the Home, the *Salli* and the *Chaoni* farms. The Home farm lies east of the town, about 200 yards from the Mori gate. The *Salli* farm is $5\frac{1}{2}$ miles to north-west, and the *Chaoni* farm about 2 miles to the south-west of the town. The farm lands are classed as culturable waste. The soil is *rausli*. There is no irrigation except of a small area, about 300 *bígahs*, from the Western Jamna Canal. On this are raised fodder crops. The natural productions are various kinds of grasses, of which in ordinary years there is a most luxuriant crop. The best kinds, yielding both grain and fodder, are the following:—*Anjan sámak* and *palingee gándhi*, *súrwaía páwa* and *lámp*.

Besides the above, the *bírs* or *rakhs* (grazing lands) abound with *jál*, *kair*, *jant* and *ber* trees (wild plum), the first predominating; all of these bear fruit. The fruit of the *jál* tree is called *píl*, and is much eaten by the poor people. The fruit of the *kair* tree is called *faint*, and is used by the people generally for pickling; when young and green, it is like capers; when ripe it is called *pinjái*, and, being of a sweetish flavour, is eaten by the poorer classes. The fruit of the *jant* is called *síngar*, resembling a bean; when tender and green it is used as a vegetable. The *ber* tree (*zizyphus jujuba*) or wild plum has a fruit like the cherry. The fruit also is called *ber*. The dried

leaves, called *pála*, are excellent fodder. The present strength of cattle on the farm is given in the margin. The number of calves born during the year beginning 1st January 1883 to date is—

Bull calves ..	568
Heifer „ ..	599

A certain number of bull calves are reserved for breeding purposes, some to recruit the farm stock and others for distribution to districts and village proprietors. The rest are castrated and are kept separately from the other cattle. When they are four years old a careful selection is made, and those that are fit for the purposes of artillery draught are made over to the Commissariat Department at Ferozpur. The heifer calves are reserved at the farm for breeding purposes. As many as are rendered unfit for breeding purposes, whether by age or by natural faults, are cast and sold by public auction.

Sheep and goats.

The statistics regarding sheep and goats are shown in Table No. XXII already referred to. A recent estimate by the Deputy Commissioner gives the number of sheep in the district as 47,794. Sheep-breeding from Government rams is at present confined to

the cattle farm. The table given of the farm stock shows that there are in the farm 235 rams, 687 sheep, and 295 lambs. The rams are of English stock (Southdown and Leicestershire), and are distributed generally to improve the breed of sheep.

Horse-breeding on the branded mare system was introduced in the Hisar district in the winter of 1882-83, when 373 mares were branded. Six stallions were sent to the district, of which three were thoroughbred English, two Arabs, and one a Norfolk trotter. Operations have been fairly successful; but bad seasons and scarcity of grass and fodder have impeded the development of the system. A *salútri* and *zilahdár* are entertained on the district establishment. Mule-breeding is not carried on in the district. There are no horse fairs.

Chapter VI, B.

Occupations,
Industries,
and Commerce.

Sheep and goats.

Horses and mules.

SECTION B.—OCCUPATIONS, INDUSTRIES AND
COMMERCE.

Table No. XXIII shows the principal occupations followed by males of over 15 years of age as returned at the Census of 1881. But the figures are perhaps the least satisfactory of all the Census statistics, for reasons explained fully in the Census Report; and they must be taken subject to limitations which are given in some detail in Part II, Chapter VIII, of the same Report. The figures in Table No. XXIII refer only to the population of 15

Occupations of the
people.

Population.	Towns.	Villages.
Agricultural ..	18,113	809,171
Non-agricultural ..	58,005	118,894
Total ..	76,118	428,065

years of age and over. The figures in the margin show the distribution of the whole population into agricultural and non-agricultural, calculated on the assumption that the number of women and children dependent upon each male of over 15 years of age is the same whatever his occupation. These figures, however, include as agricultural only such part of the population as are agriculturists pure and simple; and exclude not only the considerable number who combine agriculture with other occupations, but also the much larger number who depend in great measure for their livelihood upon the yield of agricultural operations. More detailed figures for the occupations of both males and females will be found at pages 79 to 87 of Table No. XIIA and in Table No. XIIB of the Census Report of 1881. The figures for female occupation, however, are exceedingly incomplete.

Table No. XXIV gives statistics of the manufactures of the district as they stood in 1881-82. The district of Hisar has no manufactures of importance. The manufacture of saltpetre has been already alluded to. It is made by *baniás*, who pay small fees as seignorage to the owners of the village where it is made. It is not refined in the district, but sent in the rough to Farrukhabad in the North-West Provinces. The traders of Farrukhabad

Principal industries
and manufactures.

Chapter IV, B.
Occupations,
Industries,
and Commerce.

Principal industries
and manufactures.

refine it and send it on to Calcutta. A refinery has lately been established at Dehli, but the manufacture and the trade have fallen off remarkably of late years. Coarse country cloth is made more or less in every village, both for local use and for export, but the chief seat of this industry is at Fatehábád. In this town, too, and in a few others, a caste, called *Dabgars*, are famous for the manufacture of leather scales, and *kúppas*, or leathern vessels for oil. These have a wide local reputation, and their handiwork is exported to considerable distances. Mr. Lockwood Kipling, Principal of the Lahore School of Art, has kindly furnished the following note on some of the special industries of the district:—

“Mr. Ogilvie has given an account of the brass and bell-metal (*kánsi*) trade of Bhiwáni in this district, from which it appears that about 200 artizans are employed, and that their earnings vary from Rs. 7-8 to Rs. 8 per mensem. The ware is exported to all parts of the Punjab and to Rájputána. Ornamental work does not appear to be made, but the *kánsi* cups and platters sent to the Punjab Exhibition were fairly well finished. Brass is imported from Calcutta, but mainly for re-export to Bikáner; and old broken brass (*phút*) is chiefly used for local purposes. Some brass is manufactured from imported copper and zinc in the proportion of 24 seers of copper to 16 seers of zinc in the maund of 40 seers. The cost of the metal thus manufactured is calculated at Rs. 26 per maund. *Kánsi* is made with copper and pewter. The cost is Rs. 39-8 per maund. Besides its brass trade, Bhiwáni has a name for carved *chaukátas* or doors. Elaborately carved models mounted with brass were sent to the Exhibitions at Lahore and Calcutta, and one is now in the Lahore Museum. In this district the leathern *hukka*, metal-bound, common in many parts of the Punjab, is quaintly adorned with strips and studs of copper, brass, and sometimes silver, roughly engraven. The execution is rough, but no fault can be found with the design. Good *hukkas* thus adorned cost from Rs. 5 to Rs. 12, and last a long time.

“The embroidered woollen *ohrnás* or *chadars* of the district are worthy of mention, for, though nothing could be more homely than the material, or more simple than the design, they are thoroughly good and characteristic in effect. Two breadths of narrow woollen cloth are joined with a curious open work, sewn and covered with archaic ornaments in wool and cotton thread of different colours, needle-wrought in a sampler stitch. The cloth is a fine red, though somewhat harsh and coarse in texture; and though all the designs are in straight lines, human figures and creatures are sometimes oddly indicated. The price of these *chadars* was originally about Rs. 4, but since a sort of demand has arisen among amateurs interested in Indian fabrics, the rate has been doubled. It is scarcely likely that the woollen *phulkári* will grow, like the silk and cotton one, from a domestic manufacture for local use, into a regular production for export trade. Similar *chadars* are made and worn in the Sirsa district. The better known cotton *phulkári* embroidered with silk is of exceptional excellence in this district. From Hisár and Hási *chadars* and *ghagras*, of dark indigo or madder-dyed rough country cloth with orange coloured silk in bold patterns, diversified by the insertion of small circular mirrors, have been sent to various exhibitions. The mirrors come from Karnál, where globes of thin glass, about four or five inches in diameter, are blown and silvered on the inside. These are broken up, and the fragments are used for *shishadár phulkáris*, and formerly in the *shishadár* plaster work, to be seen in

buildings of the last century. In the Amritsar district are merchants who have pushed the *phulkári* to such good purpose that it has become a profitable industry. It is possible that the extension of the railway may do something for the hitherto purely local and domestic industries of this district."

The chief centres of trade are Bhiwáni, Hási, and Hisár. The town of Fatehabád in the north-west part of the district also acts to some extent as a trade centre for the country in its neighbourhood; but the greater portion of the agricultural produce of the northern part of the district would probably find its way direct to Hisár or Hási without going through Fatehabád. Practically, we may consider that all the trade of the district, except a very small part, comes to one or other of these centres of distribution. With regard to Hási and Hisár, it may be said generally that goods traffic is all on a line between east and west. The produce of the surrounding country comes from all directions towards the central marts; but the trade with the countries outside the district, and also the through traffic, passes along the main road between Dehli and the western Panjab. The greater part of this trade will now doubtless be diverted from the Sirsa and Dehli road, and will go and come by rail *viâ* Rewári and Bhiwáni. As to the portion between Hási and the west, the whole traffic will, without doubt, be transferred to the railway, which at this part follows the same direction as the existing road. The trade routes to and from Bhiwáni are more complicated. The statements printed on the next pages show the trade of Bhiwáni. Imports from the east are either from Dehli or from the Rohtak district. The former will doubtless come wholly by rail. Also the produce of the western agricultural districts may be expected to come by rail *viâ* Hisár and Hási. A very large export trade, especially in grain and salt, will pass from Bhiwáni to Dehli and the east generally by the railway. The trade with Bikáner and the States of Rájputána and the south-west will continue to follow the present existing routes; but it is expected that it will be largely developed by the facility of transport between Bhiwáni and the east and north-west which is afforded by the new line.

The statements printed on the next pages show the quantity of average yearly imports to be 1,767,900 maunds, and of exports 1,033,000 maunds. It is calculated that out of this total quantity, 789,700 maunds of imports and 520,800 maunds of exports will be carried by the new line. The traders at Bhiwáni are sanguine as to the extension of trade owing to the opening of the Railway. The increase of imports under the heads of sugar and saccharine products, grain, cloth, and metals, is calculated at about $4\frac{1}{2}$ lakhs of maunds, or more than half as much again as the existing imports; while the increase in exports is estimated under the same heads at nearly six lakhs of maunds. Although these anticipations may be too sanguine, there can be no doubt that the through trade of this town will be greatly enlarged.

Sugar and other saccharine products are among the chief staples of trade. Sugar to the quantity of 100,000 maunds comes

Occupations,
Industries, and
Commerce.
Trade of Bhiwáni.

entirely from the direction of Dehli, and will be carried by rail. It is expected that the quantity imported will be largely increased. It is chiefly exported towards Bikáner; but a small quantity will be carried by rail towards Hisár and Sirsa. Unrefined sugar and molasses (*shakkar* and *gúr*) are imported partly from Dehli and partly from the Rohtak and Karnál districts. The Dehli portion only, estimated at about 90,000 maunds out of 275,000 maunds total import, will be transported by rail; but it is expected that the quantity imported by this route will be very largely increased. At present the export of this article is exclusively in the direction of Bikáner and the south-west; but it is thought that a trade may be developed in the direction of Hisár and the north-west also, now that the country is opened up by the railway.

The through trade in grain is very considerable. It is estimated that one *lakh* of maunds is imported from the east, of which 25,000 maunds (of wheat) come from Dehli, and will be carried by rail. The rest comes from Rohtak. Three *laks* of maunds of grain and oil-seed are imported from the direction of Hisár and Sirsa, all of which will now be conveyed by rail, and the same amount will be exported to the eastward, also by rail. It is expected that the opening of the railway will stimulate this traffic.

The total import of rice from the Dehli direction (all of which will come by rail) is 75,000 maunds. The greater part of this, 64,000 maunds, is exported to Bikáner.

Drugs.—The import of drugs and spices and kindred articles from the Dehli side is 25,000 maunds drugs; and that from the Sirsa side 5,000 maunds (colours). The drugs not consumed in the town are exported to the south-west (Bikáner), and the colours to the east. The import trade will now come by rail; and a considerable extension of the export trade in the direction of Ferozepore is anticipated.

European cloth.—14,000 maunds of European cloth are imported from the Dehli side, and after allowing for local consumption, the balance is exported towards Bikáner and also Hisár and Sirsa. A very large increase in this trade is anticipated, and European piece-goods will probably be largely imported direct from Bombay.

Country cloth.—2,000 maunds of country cloth is imported from the Dehli side, and 1,000 maunds from the countries to the south. In addition, about 4,000 maunds are made in the town. The export is entirely to the north-west.

Metals.—The imports amount to 30,000 maunds, all from the Dehli side; about 20,000 maunds are now exported towards Western Rájputána, and 8,000 maunds to the direction of Sirsa. A large development of this trade is anticipated.

Tobacco.—The import for local consumption is 1,500 maunds, of which 200 maunds come from Dehli.

Salt.—Bhiwáni was once the great local salt emporium, but since the opening of the Dehli and Rájputána line the Sambhar salt is carried direct to Dehli and also southwards from stations nearer to the locality of production. About 150,000 maunds of Didwána salt, however, are still imported, and 100,000 maunds are exported to the east. About 400 maunds of Lahauri salt is imported from

Dehli. It is possible that an export trade in Didwāna salt in the direction of Ferozepore may be developed by the railway.

Sarsaf, &c.—*Sarsaf* (or mustard oil), flax, bamboos, and stone do not call for special remark.

Cotton.—The import and export of cotton will probably not be affected by the railway, unless an export trade of cleaned cotton should be established with districts down the line. Cotton is imported from the surrounding agricultural districts, and is exported towards Bikaner.

Wool.—The import of wool is chiefly from the west and south. It is calculated that 15,000 maunds are exported eastwards.

Ghi, cotton-seeds, &c.—The trade in these articles will not be influenced by the railway, the supply for local consumption being derived from the surrounding country.

Saltpetre.—About 25,000 maunds are exported in the Dehli direction.

Country and European threads, country and Kábul fruits, Multáni Clay.—These articles do not call for special remarks.

Leather.—9,000 maunds of leather are imported chiefly from the surrounding country. About 2,500 maunds from the west may be expected to come by Hisár by rail, and 6,000 maunds to be exported by rail towards the east.

Coined money.—Money (called by the traders *rokar*) will probably be freely sent by rail between Dehli and Bhiwáni, and finds a place in the list of exports and imports.

The total quantity of imports of Hānsi is calculated at 185,000 maunds, and the export at 260,700 maunds. There is a through trade in sugar, molasses, rice, metals, tobacco, and flax, &c., between Dehli and the west. There is a large export trade in grain (gram and *múng*) towards Dehli; and a through trade in leather between the west and Dehli. Indigo, cotton and wool, the produce of the neighbouring country, are exported eastwards. All this heavy traffic may be expected to be diverted from the direct road to the railway route *vid* Rewári.

The total imports of Hisár town are estimated at 117,500 maunds, and the exports at 46,800 maunds. Being the headquarters of the district, the retail trade is large; and this accounts for the disparity between exports and imports. There is an export trade towards Dehli in grain, saltpetre, cotton, and leather, which will be carried by rail. Similarly the whole of the imported goods from the Dehli side will now be carried by rail. There is a small export trade in wool and cotton towards the west. It goes by river from Fázilka to Karáchi.

The railway does not touch Fatehábád itself. Fatehábád, however, will probably continue to be the trade centre of that part of the district, and will be connected by a straight road with the nearest station. All the local trade which goes entirely east and west may be expected to be carried by rail. There is an export trade in grain (gram and oil-seed) and in hides and leather; cloth, sugar, and rice are imported from the east. The through trade from Sirsa has been mostly accounted for in the estimates for Hānsi and Bhiwáni, which are the chief marts for this trade.

Chapter IV, C.

SECTION C.—PRICES, WEIGHTS AND MEASURES,
AND COMMUNICATIONS.

Prices, Weights
and Measures,
and Communica-
tions.

Prices, wages, rent-
rates, interest.

Table No. XXVI gives the retail *bōzār* prices of commodities for the last twenty years. The wages of labour are shown in Table No. XXVII, and rent-rates in Table No. XXI; but both sets of figures are probably of doubtful value. The figures of Table No. XXXII give the average values of land in rupees per acre, as shown in the margin, for sale and mortgage; but the quality of land varies so enormously, and the value returned is so often fictitious, that but little reliance can be placed upon the figures.

Communications.

The figures in the margin show the communications of the district as returned in quinquennial Table No. I of the Administration Report for 1878-79; while Table No. XLVI shows the distances from place to place as authoritatively fixed for the purpose of calculating travelling allowance. Table No. XIX shows the area taken up by Government for roads and railways in this district.

Communications.	Miles.
Railways	75
Metalled roads ..	42
Unmetalled roads.	509

Railways.

The State Railway from Rewāri to Firozpur runs through the district for 75 miles, with stations at Bhiwāni, Bowāni Khara Hānsi, Satraud, Hisār, Jakhaud, Adampur, and Bhattu.

Roads.

The following table shows the principal roads of the district, together with the halting places on them, and the conveniences for travellers to be found at each :—

Route.	Halting place.	Distance in miles.	Remarks.
Dehli to Sirsa.	Mundahal	..	Unmetalled. Encamping-ground and sarai.
	Sorkhi ..	4	Partly metalled. Police bungalow.
	Hansi ..	10	Metalled. Dak bungalow, police bungalow, sarai and encamping-ground.
	Hisar ..	16	Metalled. Dak bungalow, sarai and encamping-ground.
	Agroha ..	13	Partly metalled. Police bungalow, sarai and encamping-ground.
	Badopal ..	8	Encamping-ground.

	Hansi	(As above).
	Bowani ..	12	Unmetalled. Encamping-ground.
Bhiwani to Dehli.	Bhiwani ..	12	Unmetalled. Police bungalow, sarai and encamping-ground.
	Bhiwani	(As above) metalled. Next halting place is Kharak in the Rohtak district.

There are also unmetalled roads from Hisár to Bhiwáni, 34 miles; Hisár to Tuhána (*viâ* Barwála), 43 miles; Tuhána to Ratiya, 21 miles; Ratiya to Fatehábád, 16 miles; Hási to Barwála, 22 miles, on which there are no fixed halting places. A good unmetalled road runs along the right bank of the Western Jamna canal. The dák bungalows are completely furnished and provided with servants. The police bungalows have furniture, crockery and cooking utensils, but no servants.

There are Imperial post offices at Hisár, Hási, Bhiwáni, Tusham, Kairu, Bahal, Ratiya, Fatehábád, Tuhána, Barwála and Balsamand; Money Order Offices and Savings Banks also exist at these places.

A line of telegraph runs along the whole length of railway, with a telegraph office at each station.

Total	532	196	336

The executive staff of the district is assisted by neither Cantonment nor Honorary Magistrates. The police force is controlled by a District Superintendent. The strength of the force, as given in Table No. I of the Police Report for 1881-82, is shown in the margin. In addition to this force, 988 village watchmen are entertained, and paid by the village headmen from a village house tax. The *thanas* or principal police jurisdictions, and the *chaukis* or police outposts, are distributed as follows:—

Tahsil Hisár.—*Thands*—Hisár, Siwani, and Balsamand; *chauki* Agroha. *Tahsil Hansi.*—*Thands*—Hansi and Narnaund; *chauki* Madanheri. *Tahsil Bhiwani.*—*Thands*—Bhiwani, Tosham, Kairu, and Bahal; *chaukis*—Dinaud, Bamla, Sungarpur, Bajina and Rodan. *Tahsil Fatehabad.*—*Thands*—Fatehabad and Ratiya; *chaukis*—nil. *Tahsil Barwala.*—*Thands*—Barwala and Tuhana; *chaukis*—nil.

There is a cattle-pound at each *thana*, and also at Hisár attached to the Government Cattle Farm, and at Landa Khera, Mengni Khera and Narnaund under the management of the Canal Department. The district is within the Ambála Police Circle, under the control of the Deputy Inspector-General of Police at Ambála.

The district gaol at head quarters contains accommodation for 289 prisoners. Table No. XL gives statistics of criminal trials

Table No. XLI of police inquiries, and Table No. XLII of convicts in gaol for the last five years. There are no criminal tribes in the district.

The gross revenue collections of the district for the last 14 years, so far as they are made by the Financial Commissioner, are shown in Table No. XXVIII; while Tables Nos. XXIX, XXXV, XXXIV and XXXIII give further details for land revenue, excise, license tax and stamps respectively. Table No. XXXIIIA shows the number and situation of Registration offices. The land revenue of the district is separately noticed below. The central distilleries for the manufacture of country liquor are situated at Hisár, Hási and Bhiwáni. The cultivation of the poppy is forbidden in this district. Table No. XXXVI gives the income and expenditure from district funds, which are controlled by a committee consisting of 30 members selected by the Deputy Commissioner from among the leading men of the various *tahsils*, and of the Civil Surgeon and District Superintendent Police, as *ex-officio* members, and the Deputy Commissioner as President. Table No. XLV gives statistics for municipal taxation, while the municipalities themselves

are noticed in Chapter VI. The income from provincial properties for the last five years is shown in the margin.

The bungalows and encamping-grounds have already been noticed at page 59, and the cattle-pounds at page 60. Figures for other Government estates are given in Table No. XVII, and they and their proceeds are separately noticed below.

The Imperial Customs' Preventive Line which formerly passed through this district has been abolished.

Table No. XXXVII gives figures for the Government and aided, middle, and primary schools of the district. There are middle schools for boys at Hisár, Hási, Bhiwáni and Tuhána; while the primary schools are situated at Hisár, Nangthala, Kayla, Balsamand and Kurri in the Hisár *tahsil*; at Hási, Sisae, Narnaund, Mamrezpur, Khanda, Petwár, Bowáni and Jamálpur in the Hási *tahsil*; at Bhiwáni, Tusham, Kairu and Tigrána in the Bhiwáni *tahsil*; at Fatehábád, Aharwán and Ratiya in the Fatehábád *tahsil*; and at Barwála, Tuhána and Jamálpur in the Barwála *tahsil*. The district lies within the Ambála circle, which forms the charge of the Inspector of Schools at Ambála. Table No. XIII gives statistics of education collected at the Census of 1881, and the general state of education has already been described at pages 30, 31.

The Bhiwáni district school was established in 1864. It teaches Lundi and Mahájani, as well as the ordinary Urdu course. The staff consists of six English, six Persian, three Urdu, and one mathematical teacher, and three Hindi monitors.

The table at the top of the next page indicates the work of the schooling for the last five years :—

* There was no Upper Primary Department until the year 1879.

† On account of new classification there was no 3rd class formed this year.

Medical.

Table No. XXXVIII gives separate figures for the last five years for each of the dispensaries of the district, which are under the general control of the Civil Surgeon, and in the immediate charge of Assistant Surgeons at Hisár and Bhiwani, and of native doctors, i.e., Hospital Assistants, at Hási and Fatehabád. The dispensary at Hisár is situated on the south side of the town, and contains accommodation for 40 male and 8 female in-door patients. It is attended annually by some 7,500 out-door and 300 in-door patients. The staff consists of an Assistant Surgeon, a Hospital Assistant, a compounder, dresser, and menials.

Ecclesiastical.

There is a small church—Saint Thomas's—at Hisár capable of seating some 60 persons. The Chaplain at Dehli visits the station once in every three months.

Head-quarters of other departments.

The portion of the Rewari and Ferozpur Railway which runs through the district is in the charge of the District Traffic Superintendent at Rewari; while the District Traffic Manager at Ajmere controls the line. The head offices of the Railway are at Ajmere. The Western Jamna Canal, as far down as Bahadra, is under the charge of the Executive Engineer, Hási Division, stationed at Hisár; the Superintending Engineer of the Canal has his head-quarters at Dehli. The main Dehli and Hisár road is under the Executive Engineer, General Branch, at Dehli. The telegraph lines and offices of the district are controlled by the Telegraph Superintendent at Bandi Kui; and the post offices by the Superintendent of Post Offices at Hisár. The Government Cattle Farm under the Military Department is under the charge of a Superintendent, and is controlled by the Deputy Commissary General at Ambála.

Statistics of land revenue.

Table No. XXIX gives figures for the principal items and the totals of land revenue collections since 1868-69. Table No. XXXI gives details of balances, remissions, and agricultural advances for the last fourteen years; Table No. XXX shows the amount of assigned land revenue; while Table No. XIV gives the areas upon which the present land revenue of the district is assessed. Further details as to the basis, incidence, and working of the current Settlement will be found in the last pages of this chapter.

Summary Settlement, 1816 A.D.

When first the attention of the British Government was seriously turned to Hariána, in 1810, the country, with the exception of the sub-division (*pargana*) of Hási and a few of the

larger villages in other parts of the district, was either lying waste, or, if occupied, was held on a precarious tenure by recent settlers, unattached by ties of association to the soil, and ready to fly, at a moment's notice, beyond the border. In Hānsi even, where the effects of the *chālisa* famine had been less severely felt, the inhabitants were mostly found crowded together in masses in the larger villages, where they had betaken themselves for the sake of mutual security. The smaller villages were completely deserted. The change of rule, however, attracted large numbers of immigrants, principally from Rājputāna, and the population rapidly increased; while in Hānsi the people began to leave the large villages and spread themselves once more over the face of the country, re-occupying their old homes. It was not, however, until 1816 that any attempt was made to bring the district under a land revenue Settlement. In that year a Settlement for 10 years was effected by Mr. W. Fraser, which was followed by a 5 years' Settlement in 1825, and by another Settlement for 10 years made in 1831-32. The revenue assessed at these various Settlements ranged somewhat above $4\frac{1}{2}$ lakhs of rupees. The average demand for the five years preceding 1840-41 amounted to Rs. 4,88,609. It must not be supposed, however, that this sum was collected. Mr. Brown, the officer who conducted a revised Settlement in 1840-41, ascertained that, of the seventeen years from 1824 to 1840, no less than nine were years of either total or partial failure of the crops, attended by a deficiency in the collections, aggregating more than 50 per cent., below the revenue assessed, and two more were seasons so bad as to render considerable remissions of revenue necessary, though not quite to the same extent. He embodies the results of his inquiries in the following remarkable table :—

Year.	Revenue demand.	Balances.	REMARKS.
A.D.	Ra.	Ra.	
<i>Fual</i> 1233=1825	4,51,916	...	
" 1234=1826	4,50,386	19,247	
" 1235=1827	4,59,624	5,660	
" 1236=1828	4,67,113	25,312	
" 1237=1829	4,73,524	46,796	
" 1238=1830	5,17,434	2,78,960	The balance partly owing to a bad season and partial failure.
" 1239=1831	4,60,359	8,367	
" 1240=1832	4,69,284	2,23,870	Ditto. ditto.
" 1241=1833	4,77,658	4,28,205	A total failure and famine.
" 1242=1834	4,77,127	8,137	
" 1243=1835	4,85,678	2,50,317	A bad season and partial failure.
" 1244=1836	4,91,337	12,306	
" 1245=1837	4,88,377	3,63,141	An almost total failure.
" 1246=1838	4,86,718	1,62,225	A partial failure throughout the district.
" 1247=1839	5,03,013	64,079	Ditto ditto.

NOTE.—To the above 15 years may be added the year 1832 F. S. (1824) when the failure was also so total that not a fraction of revenue was collected, the whole having been remitted; and the last year 1248 F. S. (1840) when a balance equal to that of 1247 F. S. accrued from a bad season and partial failure.

Taking an average over the 15 years from 1825 to 1839, the collections fell short of the assessment by 28 per cent. The assessment was in fact a farce. No means existed of enforcing payment from the then shifting population, ever ready to fly beyond the border,

Chapter V. Administration and Finance.

Summary Settlement,
1816 A.D.

Chapter V.
Administration
and Finance.

Summary Settlement,
1816 A.D.

if in any season they found the British money rates press more heavily than the collections in kind made by the neighbouring Native States. The collection of the revenue, in fact, was, as the Settlement Officer of 1840 expresses it, "a mere yearly juggle between the *tahsil* officers and the people." In the sandy tracts to the west, another cause tended to cause fluctuations of revenue. The soil, though productive in good years, and especially after having lain fallow for several years, is very easily exhausted. The settlers from *Bikāner* would at first plough up every acre, leaving not a corner of their allotment uncultivated. This would continue for a few years, until the land was exhausted, and then the *Bāgrīs* would leave their villages and seek a new settlement elsewhere, sure of finding waste land on every side only waiting to be brought under cultivation.

Regular Settlement,
1840 A.D.

Such was the state of things upon which the proceedings of the First Regular Settlement of the land revenue opened in 1839-40.* At first a revised demand was assessed, amounting to Rs. 4,47,315, giving only a small reduction upon the average demand for the past five years. During the course of his investigations, however, the Settlement Officer became convinced of the impossibility of assessing the country so highly; and that owing to the nature of the soil and climate, and the character of the people, heavy balances were inevitable, except under circumstances which experience had shown to be most exceptional. He accordingly again revised his own assessments throughout the district, excepting only in those villages which enjoyed the use of canal water; and this time, basing his calculations, not upon the demands but upon the collections for the past five years, he fixed an assessment aggregating upon the non-irrigating villages Rs. 2,58,255, granting a reduction of 37½ per cent. from the average of the previous assessment. Adding Rs. 1,20,000 for the canal villages, the new assessment stood, in round numbers, at Rs. 3,80,200. This Settlement was completed in 1841, and confirmed for a period of 20 years, to expire on 1st July, 1860. The district at that time contained a total of 654 villages. Of these, however, only 442 were settled by Mr. Brown. Of the remainder, thirty villages were held as military fiefs (*jāgr*), and excluded on that account from Settlement; and the dispute, already detailed, between the Government and the *Patiala* State, and the desire to gain further experience as to the action of the river *Ghaggar*, rendered it advisable to postpone the Settlement of 182 villages lying along the north-east border of the district. These

Regular Settlement,
1852 A.D.

were not brought under Regular Settlement until 1852. During the currency of this Settlement 32 villages were abandoned, but the addition of the *Bhiwāni pargana* in 1861 again brought up the number of villages to 659, at which figure they now stand. In 1860-61 a summary Settlement was effected for three years, in order to give time for preparations for a revision of the assessment, which was made by Munshi Amīn Chand and reported by him in 1864. A variety of causes, most prominent among which was the destruction of the records during the Mutiny, tended to complicate the Settlement proceedings, but the whole was completed and sanctioned in 1863 for a term of twenty years, to expire on July 1st

Revision of Settlement,
1864 A.D.

* The First Regular Settlement was conducted by Mr. Brown.

1883. The new assessment amounted to Rs. 4,10,226, or, deducting Rs. 60,478 as the assessment of the newly added territory of Bhiwani, to Rs. 3,49,748. This shows a further reduction, below the Settlement of 1840, of Rs. 80,454, or almost exactly 8 per cent.

The Settlement now current is sanctioned for a term of 20 years, from 1st July 1863. The result of the Settlement was to assess the fixed land revenue of the district at the amount of Rs. 4,10,226, being a reduction of 8 per cent. on the previous demand. The incidence of the fixed demand per acre as it stood in 1878-79 was Rs. 0-5-10 on cultivated, Rs. 0-3-3 on culturable, and

Class of land.	Highest Rate.			Lowest Rate.		
	Rs.	A.	P.	Rs.	A.	P.
Irrigated from canals...	1	4	0	0	12	0
Moist (<i>sailāb</i>) ...	0	10	0	0	8	0
Dry ...	0	6	0	0	3	0

Rs. 0-3-0 on total area. The general revenue rates used for purposes of assessment are thus stated (as shown in the margin) at pages 635ff of the Famine Report (1879).

The areas upon which the revenue is collected are shown in Table No. XIV; while Table No. XXIX shows the actual revenue for the last 14 years. The statistics given in the following tables throw some light upon the working of the Settlement:—Table No. XXXI.—Balances, remissions, and *takāvi* advances. Table No. XXXII.—Sales and mortgages of land. Tables Nos. XXXIII and XXXIIIA.—Registration.

Table No. XVII shows the area and income of Government estates; while Table No. XIX shows the area of land acquired by Government for public purposes.

Table No. XXX shows the number of villages, parts of villages and plots, and the area of land of which the revenue is assigned, the amount of that revenue, the period of assignment, and the number of assignees for each *tahsil* as the figures stood in 1881-82.

CHAPTER VI.

TOWNS & MUNICIPALITIES.

Chapter VI.
Towns and
Municipalities.
 General statistics of
 towns.

At the Census of 1881, all places possessing more than 5,000 inhabitants, all municipalities, and all head-quarters of districts and military posts were classed as towns. Under this rule the following places were returned as the towns of the district:—

<i>Tahsil.</i>	<i>Town.</i>	<i>Persons.</i>	<i>Males.</i>	<i>Females.</i>
Hisár ...	Hisár ...	14,167	7,827	6,340
Hánsi ...	Hánsi ...	12,656	6,588	6,068
	Sisae ...	5,174	2,705	2,469
Bhiwáni ...	Bhiwáni ...	33,762	17,631	16,131
Barwála ...	Tuhána ...	4,155	2,111	2,044
Fatehabád ...	Ratiya ...	3,212	1,730	1,482
	Fatehabád ...	2,992	1,613	1,379

The three large cities are all situated in the southern portion of the district, which came earliest under the direct influence of British rule. The distribution by religion of the population of these towns and the number of houses in each are shown in Table No. XLIII, while further particulars will be found in the Census Report in Table No. XIX and its appendix, and Table No. XX. The remainder of this chapter consists of a detailed description of each town, with a brief notice of its history, the increase and decrease of its population, its commerce, manufactures, municipal government, institutions, and public buildings; and statistics of births and deaths, trade and manufactures, wherever figures are available.

Hisár Town;
description.

The town of Hisár lies in north latitude 29° 9' 51" and east longitude 75° 45' 55," and contains a population of 14,167 souls. It is situated on the Western Jamna Canal, 102 miles west of Dehli. The country in the immediate neighbourhood is well wooded; and numerous fruit gardens surround the town. The town itself is completely surrounded by an old wall with four gates, *viz.*, the Dehli and Mori to the east; the Taláki, to the west; and the Nagauri, to the south. The streets are wider and less tortuous than in most native towns. They are, as a rule, well metalled, and the drainage and sanitary arrangements generally are in a fairly satisfactory condition. Straggling suburbs stretch irregularly beyond the walls in every direction, mostly composed of houses of a poorer description. The civil station lies to the south of the city, on the opposite side of the Western Jamna Canal, and contains the residences.

of the district, canal, and railway officials stationed here. The Hisar Cattle Farm, described at pages 49, 50, is celebrated over all India. It is managed by a Superintendent (an officer in the Commissariat Department) whose charge extends over an estate of 43,287 acres, chiefly laid down in pasturage. The farm supplies bullocks for the second line of artillery wagons for the whole of upper India. Bulls for breeding purposes are also reared here and distributed all over the Punjab; as well as rams of a superior class. The principal building of antiquarian or architectural interest, within the walls, is the Jāma Masjid built by Firoz Shāh Tughlak; while immediately outside the town, to the west beyond the Talāki gate, are the ruins of what must have been a handsome building called the *Gūjri Mahal*, said to have been built by Firoz Shāh, for the residence of a Gūjri mistress. Certain inscriptions, within the building, seem to bear out this story. Within the town is the palace of the Emperor Firoz Shāh. Immediately under the building a spiral staircase leads to a series of rooms, said to be connected underground with a similar building in Hānsi, though this is exceedingly improbable. The gateway and guard-rooms of the old palace and the underground apartments exist in a state of good preservation. It is said that these apartments were so arranged, that a stranger wandering among the dark passages that connected them, would inevitably be drawn towards a small and dark room in the centre, to which, if he tried to extricate himself, he would invariably return. Colonel Minchin, who made a partial exploration, believes this account to be true. A modern building, occupied by the Superintendent of the Cattle Farm, now stands on the site of the palace. There is a good supply of excellent drinking water from the city wells, whose depths vary from 20 to 100 feet. There are also numerous tanks for drinking and washing purposes.

In the year 1354 A.D. Firoz Shāh erected the fort and founded the town of Hisar; he had a canal cut from the Jamna. The place was known as *Hisar Firozah*, i.e., the "fort of Firoz Shāh." He erected a red limestone pillar here, somewhat similar to the *Lāt* of Firoz Shāh at Dehli. It is still standing (see Archæological Survey Reports V., 140-142). Prior to that time, Hānsi had been the principal town of the neighbourhood. The new town, however, becoming the political and fiscal centre of its district, soon supplanted Hānsi in importance, and for many years continued to be the favourite resort of the Emperor, who made it the starting point for his hunting expeditions along the banks of the Ghaggar. The *débris* of Firoz Shāh's town are still visible in the mounds and broken bricks and tiles which lie scattered profusely on the plain to the south of the modern city; and tombs and temples still remain standing to tell of by-gone splendour. These remains cover a wide area. During Muhammad Shāh's reign at Dehli, Shāhdād Khān, resident of Kasūr, was Nawāb of *Hisar Firozah* for 30 years, i.e., from 1707 to 1737 A.D. He was succeeded by three others, who ruled 22 years, i.e., till 1760.

In 1747 disturbances arose which attracted the attention of the Sikhs to this portion of the Punjab. They plundered the town

Chapter VI.

Towns and Municipalities.

Hisar Town ;
description.

History.

Chapter VI.
Towns and
Municipalities.
History.

on several occasions between 1754 and 1768. In 1769, Nawáb Tájj Muhammad Khán became ruler of Hisár, which he governed for three years, being succeeded by Nawáb Najaf Khán. The Muhammadans were defeated at the battle of Jind by Rájah Amar Singh of Patiala, who established his rule at Hisár and erected a fort, now known as the "old jail."

In 1783 the terrible *chálisa kál* or famine completed the ruin which the inroads of marauding Sikhs had begun, and depopulated the town, which did not recover its prosperity for some 20 years after. About this time the Muhammadan rule at Dehli lost its vitality, and the Marahatás appeared on the scene. This period was one of constant strife in which the famous adventurer, George Thomas, the Sikhs and the Marahatás alternately gained the upper hand. There was a celebrated fort here, one of the oldest in upper India, and known as "the virgin" as it boasted to have never been taken. George Thomas repaired it; and before long a few of the old inhabitants returned, and a new town began to spring up. In 1802 Hisár passed to the British. Since then its history has been uneventful, except during the days of the mutiny, when it suffered in common with the rest of upper India. The division was transferred shortly afterwards from the North-West Provinces to the Punjab.

Taxation and trade.

The municipality of Hisár was first constituted in 1867. It is now a municipality of the second class. The committee consists of the Deputy Commissioner as President, and the Civil Surgeon and District Superintendent of Police as *ex-officio* members, and other members, all of whom are appointed by the Deputy Commissioner. Table No. XLV shows the income of the municipality for the last few years. It is chiefly derived from octroi levied at a general rate on the value of all goods brought within municipal limits. There is no special local manufacture worth noticing. The trade is not extensive. Grain, *ghi*, sugar, oil, cotton, tobacco, country cloth, and English piece-goods are imported, but only in sufficient quantities to meet the local demand. It is hoped that the trade will improve on the completion of the Rewári-Firozpur (State) Railway, which is now open between Hisár and Rewári, thereby connecting the place with the Western railway system of India.

Population and
vital statistics.

The population, as ascertained at the enumerations of 1868, 1875, and 1881, is shown below:—

Limits of enumeration.	Year of census.	Persons.	Males.	Females.
Whole town ... {	1868	14,133	7,911	6,222
	1881	14,167	7,827	6,340
Municipal limits... {	1868	14,133		
	1875	14,162		
	1881	14,167		

Town or suburb.	POPULATION.	
	1868.	1881.
Hisar Town ..	14,188	18,251
Civil Lines ..		525
Commissariat Lines		891

It is difficult to ascertain the precise limits within which the enumerations of 1868 and 1875 were taken. The details in the margin give the population of suburbs.

Chapter VI.
Towns and Municipalities.
Population and vital statistics.

The constitution of the population by religion and the number of occupied houses are shown in Table No. XLIII. Details of sex will be found in Table No. XX of the Census Report of 1881. The annual birth and death-rates per mille of population since 1868 are given below, the basis of calculation being in every case the figures of the most recent Census :—

Year.	BIRTH-RATES.			DEATH-RATES.		
	Persons.	Males.	Females.	Persons.	Males.	Females.
1868	6	7	5
1869	72	70	73

1878 ...	27	16	11	81	82	79
1879 ...	18	10	8	45	45	45
1880 ...	22	12	9	25	29	22
1881 ...	31	17	14	37	37	36
Average ...	27	15	12	43	48	44

The actual number of births and deaths registered during the last five years is shown in Table No. XLIV.

Hánsi is a town of 12,656 inhabitants, situated in latitude 29° 6' 19" north, and longitude 76° 0' 19" east. It lies on the Western Jamna Canal and on the Dehli and Hisár road, 16 miles east of Hisár. The foundation of the town of Hánsi is variously attributed to Anang Pál and Rái Pithaura, the former a Túnwár, and the latter the famous Chauhán Rájpút king of Dehli; and also, by another tradition, to a Chauhán chieftain named Mának Chand. The fort, at any rate, is attributed to Rái Pithaura. Prior to the foundation of Hisár in 1354, Hánsi, under Hindús and Muhmmadans alike, was a centre of local administration and the chief town of Hariána. In the famine of 1783 it shared the fate of the rest of the district, and lay almost deserted and in partial ruin for several years. In 1795, it became the head-quarters of the adventurer George Thomas, who had seized upon the greater part of Hariána. From this period the town began to revive. On the establishment of English rule in 1802, the town was selected as a site for a cantonment, and for many years a considerable force, consisting principally of local levies, was stationed there. In 1857, however, these levies broke into open mutiny, murdered every European

Hánsi Town.

Chapter VI.
—
Towns and
Municipalities.
Hánsi Town.

upon whom they could lay hands, and combined with the wild Rájput tribes of the district in plundering the country. On the restoration of order, it was not thought necessary to maintain the cantonment, the houses of which have since fallen into decay. Hánsi is well situated on the Western Jamna Canal, which flows close under the town, and contributes much to its appearance by the belts of fine trees which adorn its banks. The town is surrounded by a high brick wall, loop-holed and bastioned for defence. The houses are chiefly of brick, but many have fallen into ruins since the mutiny, the population being reduced by the removal of the garrison. The town seems to be falling to decay, and the streets seem quiet and comparatively deserted. On its north side lie the ruins of a large fort, dismantled after the mutiny. There are two wide streets, running through the town, and crossing each other at right angles. Half their breadth is paved, the other half being left unpaved for the use of carts. The other streets are narrow, winding, and unpaved. The drainage of the town is carried off by masonry drains in the main streets; the greater part finds its way out by the Dehli gate, and there collects and forms a marsh, impassable for months after the rainy season. The water-supply is principally derived from the canal. Water in the wells is brackish.

The town has no foreign trade. There is a sleepy traffic in country produce, cotton, *ghi*, and cereals, but this is all. It has no manufactures. The public buildings are the usual *tahsil* buildings, a police station (*thána*), Municipal Committee house, dispensary, a school-house, and a *sarái*. There is every hope that the local trade will largely increase as soon as through Railway traffic has been established between Rewári and Ferozpur. The line passes close to the town, which is thus connected with the head-quarters of the district in one direction, and with the Rájputána Railway system in the other. The Municipal Committee consists of seven members appointed by the Deputy Commissioner. The income for the last few years is shown in Table XLV, and is chiefly derived from octroi.

Vital statistics.

The population, as ascertained at the enumerations of 1868, 1875 and 1881, is shown below:—

Limits of enumerations.	Year of Census.	Persons.	Males.	Females.
Whole town ... }	1868	13,563	6,958	6,605
	1881	12,656	6,588	6,068
Municipal limits ... }	1868	13,563		
	1875	12,210		
	1881	12,656		

It is difficult to ascertain the precise limits within which the enumerations of 1868 and 1875

	1868.	1881.
Hánsi town ...	13,563	11,205
Mandi ...		862
Minor suburbs ...		59

were taken. The details in the margin, give the population of suburbs. The figures for the population within municipal limits according to the Census of 1868 are taken from the published

tables of the Census of 1875 ; but it was noted at the time that their accuracy was in many cases doubtful. It would appear from information supplied by the Deputy Commissioner that the enumeration of 1868 included all the small suburbs known as *dhants*, which were excluded in 1875 and 1881. The Deputy Commissioner in the district report on the Census of 1881, attributes the falling off in population, partly to the abolition of the Customs line, and partly to the fact that on the Census night many labourers from the town were working on the canal. The constitution of the population by religion, and the number of occupied houses, are shown in Table No. XLIII. Details of sex will be found in Table No. XX of the Census Report of 1881. The annual birth and death-rates per mille of population since 1868 are given below, the basis of calculation being in every case the figures of the most recent Census :—

The actual number of births and deaths registered during the last five years is shown in Table No. XLIV.

Sisae is a very large village, situated at a distance of about five miles to the north-east of Hānsi. It contains 5,174 inhabitants. It is simply an agricultural village, remarkable only for its unusual size. It is not a municipal town.

Sisae Town.

Year of census.	Persons.	Males.	Females.
1868	4,951	2,678	2,273
1881	5,174	2,705	2,459

The population, as ascertained at the enumerations of 1866 and 1881, is shown in the margin. The constitution of the population by religion and the number of occupied houses, are shown in Table No. XLIH. Details of sex will be found in Table No. XX of the Census Report of 1881.

The town of Bhiwāni lies in latitude 28° 46' 0" north, and longitude 76° 11' 45" east, and is situated at a distance of 35 miles south-east of Hisar. The city may be said to be a creation of the

Bhiwāni Town.

Chapter VI.
Towns and
Municipalities.
Bhiwáni Town.

British régime. At the beginning of the present century, when the Delhi territory came under British rule, Bhiwáni was an insignificant village. The tradition runs that one Ním, a Rájput, founded the village in honour of his wife Bahni, who had saved his life from treachery, and called it by her name. In 1817 Mr. William Fraser, Political Resident of Delhi, selected the village for the site of a *mandi* or free market. Up to that time the seat of the commerce of the neighbourhood had been the town of Dádri, a few miles to the south-east of Bhiwáni, and at that time under the rule of an independent Nawáb.* The exactions and excessive duties extorted by the Nawáb were a source of constant fear and annoyance to the resident traders; and upon the establishment of a mart at Bhiwáni, all the principal firms at once transferred their business thither. The rise of the city to importance was rapid. It was, till recently, the main channel through which all the trade from Bikáner, Jaisalmer, Jaipur and other States of Rájputána has flowed into Hindustán, and the principal mercantile firms of every part of Southern India had agents or *gumáshtás* there. The opening of the Rájputána Railway diverted its trade, and enormously decreased its commercial importance. But it is hoped that the construction of the Firozpur Railway, which passes close to the town on its west side, will restore its former prosperity. The town stands in an open sandy plain interspersed with low sand-hills, and bare, save in the immediate neighbourhood of the town and in favourable seasons, of trees or cultivation. Even round the town, containing though it does a large number of wealthy merchants, there is not a single garden of any description. Owing to the rapidity with which the town was increasing in size, it became necessary five years ago to throw back the old enclosing wall for a considerable distance, so as to allow room for extension. The new wall is passed by 12 main gateways. The vacant space between the new and old walls is rapidly being covered with mud hovels and enclosures, huddled together with no order or arrangement. The houses of the older part of the town are built of brick, and are frequently of several storeys. Good streets, of from 15 to 40 feet wide, extend through the town in all directions. The larger are well metalled with *kankar*, the smaller are generally unpaved and sandy. There are open outer drains on both sides of the streets; but the situation of the town being lower than the surrounding country, great difficulties lie in the way of organizing a complete drainage system. Most of the drainage at present finds its way into tanks, which are to be found both inside and outside the town, and form almost the sole supply of drinking water. The largest of these tanks is outside the old town but inside the new walls. A suggestion has been made for the formation of a public garden in its vicinity. The water-supply is deplorably bad. The wells are 60 feet deep, and the water in them is generally brackish and undrinkable. There are 82 inside and 19 outside the town, but only 26 are fit for use; in some of these even the water becomes

* The estates of the Nawáb were confiscated in 1857 on account of his rebellion at the time of the mutiny, and were bestowed upon the Rája of Jind as a reward for his fidelity.

offensive and undrinkable in the hot weather, or runs dry altogether. The only other water obtainable is from the *johars*, or water holes, already mentioned, of which there are 9 within and 17 outside the town. The greater part of them are merely irregular pits out of which the soil has been removed for making bricks. The majority of them, however, are freely used by the inhabitants.

Bhiwani is a municipal town. The committee consists of nine members. The municipal income is raised at present entirely from octroi levied on imports. Table No. XLV shows the income of the municipality for the last few years. The town still has a considerable trade in grain, cloth, and brass vessels, and is by far the largest and most important town in the division. The principal institutions of the town of Bhiwani are, the school and dispensary, and the remaining public buildings and offices are the *tahsil*, post office, police station and committee hall. It contains many temples and *dharmshāls* built by Hindú merchants.

The population, as ascertained at the enumerations of 1868,

Limits of enumeration.	Year of census.	Persons.	Males.	Females.

1875 and 1881, is shown in the margin. It is difficult to ascertain the precise limits within which the enumerations of 1868 and 1875 were

taken. The figures for the population within municipal limits, according to the Census of 1868, are taken from the published tables of the Census of 1875; but it was noted at the time that their accuracy was in many cases doubtful. The constitution of the population by religion, and the number of occupied houses, are shown in Table No. XLIII. Details of sex will be found in Table No. XX of the Census Report of 1881. The annual birth and death-rates per mille of population since 1868 are given below, the basis of calculation being in every case the figures of the most recent Census :—

Year.	BIRTH-RATES.			DEATH-RATES.		
	Persons.	Males.	Females.	Persons.	Males.	Females.
1868	15	15	16
1869	34	33	36
1870 ...	47	45	50	29	28	31

Chapter VI.

Towns and Municipalities.

Bhiwani Town.

Chapter VI.
Towns and
Municipalities.
Tuhána Town.

The actual number of births and deaths registered during the last five years is shown in Table No. XLIV.

Tuhána is a small town of 4,155 inhabitants, mostly Patháns, and is situated 40 miles north of Hisár. It was once a city of some size and importance, founded, according to tradition, in the sixth century A.D. by Anang Pál, Túnwár Rája of Dehli. Ruined during the Chauhán supremacy, it recovered its prosperity in the early Musalmán period, but having suffered many vicissitudes of plunder and famine, it has now sunk into an inferior position. The town is surrounded by a wall, and contains one central *bázár*. It possesses a police station, and is a municipal town. The committee consists of five members. Tuhána has but little trade; its income for the last few years is given in Table No. XLV. The

Limits of enumeration.	Year of census.	Persons.	Males.	Females.

population, as ascertained at the enumerations of 1868, 1875 and 1881, is shown in the margin. The constitution of the population by

religion, and the number of occupied houses, are shown in Table No. XLIII. Details of sex will be found in Table No. XX of the Census Report of 1881.

Ratiya Town.

Ratiya is a small municipal town of 3,212 inhabitants, distant from Hisár 40 miles, north-west. It is now scarcely more than an agricultural village. It was originally held by Túnwár Rájputa, and conquered from them by the Pathán invaders. It was devastated by the terrible "*chálisa* famine" in 1783; and has been colonized since British occupation by its present inhabitants. The municipal committee consists of five members. Ratiya has a small trade in grain, leather, and wool, and is the seat of a considerable manufacture of raw-hide jars or *kupás*. Its income for the last few years is shown in Table No. XLV. The population, as ascertained

at the enumerations of 1868, 1875 and 1881, is shown in the margin. The constitution of the population by religion, and the

number of occupied houses, are shown in Table No. XLIII. Details of sex will be found in Table No. XX of the Census Report of 1881.

Fatehábád Town.

Fatehábád is a small municipal town of 2,992 inhabitants, situated in latitude 29° 31' north, and longitude 75° 30' east, 30 miles to the north-west of Hisár. This town was founded by the Emperor Firoz Sháh, and named after his son Fateh Khán. There were three other forts built at the same time by Firoz Sháh in the neighbourhood of Fatehábád, named, after his other three sons, Muhammadpur, Zafarábád and Razaábád. Villages bearing the

above name still mark the sites, but the forts have long ago disappeared. At the opening of the present century, Fatehábád was the seat of the Bhattí chieftain Khán Bahádar Khán, who has been alluded to elsewhere. On the northern side of the town runs a cut from the Ghaggar, constructed by Firoz Sháh, which is still in use for purposes of irrigation. The town is well built, and stands on an eminence slightly above the level of the surrounding country. The bulk of the inhabitants are Ráíns, who were the former proprietors, but lost their status several years ago, on account of a default in payment of the Government revenue.

The town contains a police station, school, dispensary, bungalow, and *sarái*. The Municipal Committee consists of seven members. Fatehábád has a considerable manufacture of country cloth; grain and *ghí* are exported to Bikáner, and there is also a brisk trade in leather. The town contains some small *bázárs*; but the greater part of it is inhabited by agriculturists. At the north-east end there are the remains of the fort of Firoz Sháh, within which is situated a small *mínár* of that period. The main road between Sirsa and Hisár runs past this town; but traffic is now diverted to the line of rail. Bhattí is the station on the line which is nearest to Fatehábád, the distance being 12 miles. Fatehábád is a municipality, and its income for the last few

Note.—These figures are taken from Appendices A. and B. to the Annual Review of District Fund operations.

TABLE NO. XXXVII., SHOWING GOVERNMENT AND AIDED BOYS' SCHOOLS

1	2	3	4	5	6	7	8	9	10	11
Year.	MIDDLE SCHOOLS.				PRIMARY SCHOOLS.					
	English.		Vernacular.		English.		Vernacular.			
	Government.		Government.		Government.		Government.		Aided.	
	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.
1877-78	1	82	3	288	17	642	3	282
1878-79	1	71	3	277	18	559	4	441
1879-80	3	35	1	9	6	615	22	624
1880-81	3	36	1	6	6	688	20	712
1881-82	2	33	2	10	5	614	21	731

N.B.—Since 1879-80, in the case of both Government and Aided Schools, those scholars only, who have completed the Middle School course, are shown in the returns as attending High Schools, and those only who have completed the Primary School course are shown as attending Middle Schools. Previous to that year boys, attending the Upper Primary Department, were included in the returns of Middle Schools in the case of Institutions under the immediate control of the Education Department, whilst in Institutions, under District Officers, boys attending both the Upper and Lower Primary Departments, were included in Middle Schools. In the case of Aided Institutions, a High School included the Middle and Primary Departments attached to it; and a Middle School, the Primary Department. Before 1879-80, Branches of Government Schools, if supported on the grant-in-aid system were classed as Aided Schools; in the returns for 1879-80, and subsequent years they have been shown as Government Schools. Branches of English Schools, whether Government or Aided, that were formerly included amongst Vernacular Schools, are now returned as English Schools. Hence the returns before 1879-80 do not afford the means of making a satisfactory comparison with the statistics of subsequent years.

Indigenous Schools and Jail Schools are not included in these returns.
